AGRADECIMENTOS

Aos nossos pais e irmãos, por acreditarem no nosso futuro e por sempre nos incentivarem a ir em frente, passando por cima de qualquer obstáculo.

Aos amigos, por todo apoio e compreensão nos momentos mais difíceis.

Ao professor, orientador e amigo Daniel, por toda a dedicação.

À equipe da Associação Brasileira de Cosmetologia (ABC), pelo suporte oferecido.

À Maria Ines Harris, à Nícia Mourão e à Simone Alencar, pela ajuda oferecida.

E, finalmente, a DEUS, pela oportunidade de estudar na Escola de Química UFRJ e por nos dar saúde até o término dessa etapa da nossa vida.

Resumo do Projeto de Final de Curso apresentado à Escola de Química como parte dos requisitos necessários para a obtenção de grau de Engenharia Química.

OS IMPACTOS DO REACH SOBRE A INDÚSTRIA COSMÉTICA BRASILEIRA

A Comissão Européia apresentou em 2003 a proposta do REACH (*Registration, Evaluation, Authorization and Restriction of Chemical*) como uma forma de proteção à saúde humana e ambiental, sendo implementado em 2007.

Trata-se de um regulamento que visa à regular a fabricação e a comercialização de produtos químicos dentro da União Européia, atribuindo às indústrias dessas substâncias o ônus de avaliar os riscos decorrentes da utilização de seus produtos, no caso de sua produção ultrapassar a medida de uma tonelada por ano. A empresa que quiser manter a comercialização de seus produtos dentro da UE deverá registrá-los junto à Agência Européia de Produtos Químicos (ECHA).

Além das indústrias químicas, esta nova política afeta também as empresas que utilizam determinadas substâncias químicas como matéria-prima de seus produtos. Como a química está presente em, praticamente, todos os produtos utilizados no dia-a-dia pela sociedade, a política do REACH representa um enorme impacto para o setor industrial como um todo.

O setor de cosméticos, por estar em crescente expansão ao longo dos últimos anos, independentemente das crises econômicas pelas quais o mundo passa, foi escolhido como objeto de estudo. A seguir discutiremos como o regulamento REACH irá impactar a indústria brasileira de cosméticos.

De uma forma concisa, pode-se dizer que a criação da União Européia teve como objetivo promover a unidade política e econômica da Europa, melhorar as condições de vida e de trabalho dos cidadãos europeus, melhorar as condições de livre comércio entre os países membros, reduzir as desigualdades sociais e econômicas entre as regiões, fomentar o desenvolvimento econômico dos países em fase de crescimento e proporcionar um ambiente de paz, harmonia e equilíbrio na Europa.

Para defender os interesses da União Européia (UE) na sua globalidade, propor a legislação, a política e programas de ação e aplicar as decisões do Parlamento Europeu (PE) e do Conselho da União Européia (CUE) foi criada a Comissão Européia. Atualmente o presidente da Comissão Européia é o português José Manuel Durão Barroso.

Como uma forma de proteção à saúde humana e ambiental, esse bloco implementou em 2007 uma nova regulamentação com o objetivo de regular a fabricação e a comercialização de produtos químicos dentro da UE chamada *Registration, Evaluation, Authorization and Restriction of Chemicals*, ou mais simplesmente REACH, que promete criar um novo paradigma no controle de insumos químicos em circulação e uso nos países membros da UE.

A nova regulamentação atribui às indústrias de substâncias químicas o ônus de avaliar os riscos decorrentes da utilização de seus produtos, bem como o de tomar medidas cabíveis para garantir a segurança dos mesmos. Antes da sua implementação, os governos dos países do bloco é que tinham a responsabilidade de comprovar a existência de algum risco para regular, podendo inclusive proibir, a comercialização e o uso uma determinada substância. Com a implementação da nova regulamentação a indústria passa a ser responsável pela segurança das substâncias químicas colocadas no mercado. Com a inversão do ônus, espera-se maior eficácia no controle de doenças ligadas à exposição por produtos químicos perigosos e na execução de políticas ambientais. Segundo a regulamentação do REACH, a empresa que não registrar seus produtos no sistema não poderá produzi-los ou comercializá-los dentro da UE.

Outros países não pertencentes ao bloco irão incorporar o REACH à sua legislação interna, e são esses: Lichtenstein, Noruega e Islândia.

Apesar de ter pouco tempo sua implementação, da irreversibilidade da sua adoção pela Comunidade Européia e do impacto indiscutível sobre as indústrias que quiserem exportar produtos químicos e bens de consumo contendo tais produtos para a União Européia, o REACH tem suscitado diversas críticas, especialmente em relação ao fato de as novas regras implicarem

na construção de barreiras não-tarifárias possivelmente abusivas, argumentando que, mesmo que esteja dentro do direito da Europa disciplinar seu comércio em respeito a princípios socioambientais elevados, torna-se evidente a falta de isonomia de tratamento do REACH entre empresas européias e estrangeiras (HENRIQUE, 2008).

Em resposta a tais questionamentos, a UE argumenta que as medidas serão igualmente impostas a fabricantes europeus, o que afastaria o caráter discriminatório.

Por outro lado, há também quem defenda a idéia de que o REACH não é um mecanismo de proteção não tarifária, embora como todo mecanismo econômico (impostos, taxas, controle fitossanitário, etc.) possa ser usado como forma de protecionismo comercial em contextos específicos. Nesse contexto, o REACH pode ser entendido como um mecanismo de comando e controle visando melhorar as condições de vida e do meio ambiente nos países membros da UE e uma forma de intervenção que, por meio de regulamentações e sanções, busca restringir a natureza e o montante de poluição ambiental ou o uso de bem ou serviço com características indesejáveis para a saúde humana.

Muitos autores entendem que, como os objetivos do REACH exprimem as aspirações das sociedades dos países da UE, eles estão enraizados na opinião pública, desses países, e devem ser respeitados pelos exportadores de outros países, para quem aqueles objetivos são exógenos, recomendando aos exportadores brasileiros a adesão ao regulamento do programa, negociando com a Agência Européia de Produtos Químicos (ECHA) problemas específicos e dificuldades localizadas para sua implementação (HADDAD, 2008).

Figura 1.2: “Sem informação, sem mercado”

Fonte: TARAZONA, 2008

Além das indústrias químicas, esta nova política afeta também as empresas que utilizam determinadas substâncias químicas como matéria-prima de seus produtos. O REACH prevê que, para participar do mercado da UE, as substâncias químicas, estejam elas em seu estado puro ou incorporadas em produtos, terão seus registros exigidos junto à ECHA. Como a química está presente em, praticamente, todos os produtos utilizados no dia-a-dia pela sociedade, a política do REACH representa um enorme impacto para o setor industrial como um todo.

O setor de cosméticos, por estar em crescente expansão ao longo dos últimos anos, independentemente das crises econômicas pelas quais o mundo passa, foi escolhido como objeto de estudo. A seguir discutiremos como o regulamento REACH irá impactar a indústria brasileira de cosméticos.

Capítulo II – REACH

II.1 – Origem

As primeiras discussões que vieram a originar o REACH se iniciaram em 1998 quando alguns países europeus – Reino Unido, Áustria, Dinamarca, Finlândia, Holanda e Suécia – foram até o Conselho de Meio Ambiente da UE ressaltando que não havia uma política para controle de produtos químicos no continente. Com isto, em 1999, o Conselho do meio Ambiente encarregou a **Comissão Européia** de rever e criar uma nova política de regulamentação. Como consequência, em fevereiro de 2001 foi publicado o “Livro Branco”, denominado “Estratégia para uma Política Futura de Substâncias Químicas”.

O setor industrial europeu reagiu a essa estratégia alegando que haveria aumento de burocracia, prejuízo para micro e pequenas empresas, perda massiva de postos de trabalho e redução da produção além de uma possível desestruturação da cadeia produtiva. Por outro lado, entidades ambientais como o Greenpeace, WWF e Corporate Europe Observatory apoiavam uma mudança na política de substâncias químicas.

Em 2003, a Comissão Européia apresentou um anteprojeto do futuro regulamento, provocando uma intensa movimentação pró e contra o REACH (mais de 6.000 posicionamentos apresentados pelo público).

Em 2005, após estudo da KPMG (empresa internacional de consultoria) que indicava benefícios para as empresas europeias em função das inovações tecnológicas que poderiam surgir do REACH, a indústria europeia o acatou e, em 30 de dezembro de 2006, o regulamento foi publicado no Diário oficial da Comunidade europeia sob a forma do Regulamento (CE) nº 1907/2006, entretanto retificado e publicado no JO L 136, de 29.05.2007. No dia 1º de junho de 2007 o REACH entrou em vigor, substituindo a complexa e esparsa legislação comunitária anterior.

O histórico apresentado acima e a geração de uma nova política dessa natureza foram embasados pela pouca eficácia dos objetivos da legislação vigente relativa às substâncias químicas, existente desde 1967. Pouco se conseguia saber sobre os riscos associados às substâncias químicas. Por outro lado, muitas das informações existentes permaneciam junto das empresas, não existindo qualquer mecanismo automático de comunicação dos riscos das substâncias aos seus clientes ou a sua divulgação pública.

Para se ter uma idéia, atualmente existem no mercado europeu cerca de 100.000 substâncias químicas introduzidas antes de 1981, sobre as quais, segundo os formuladores da nova política, têm-se pouca ou nenhuma informação quanto aos riscos à saúde humana e ao meio ambiente. Para as substâncias introduzidas após 1981 (chamadas de “novas” no corpo da legislação) existe, por enquanto, um processo de registro longo e oneroso para os governos dos países europeus, estando registradas cerca de 4.000 substâncias. Esse processo também está sendo substituído pelo REACH.

O REACH surgiu devido à necessidade de se registrar substâncias que causam algum tipo de dano à saúde humana e ao meio ambiente e foi elaborado sob três pilares: proteção à saúde humana e ao meio ambiente e questões econômicas.

Os princípios que nortearam a concepção dessa nova política foram os seguintes:

- a) precaução e prevenção;
- b) substituição de produtos perigosos por outros mais seguros;
- c) redução de testes em animais;
- d) maior responsabilidade da indústria no que se refere à geração e à disseminação da informação e à avaliação de riscos (a indústria deve demonstrar que os produtos e seus usos são seguros antes de colocá-los no mercado);
- e) transparência da informação (o consumidor tem o direito de conhecer as características e os efeitos dos produtos que são usados).

O item 3 do artigo 1º, do capítulo I do regulamento, estabelece que compete aos produtores, importadores e usuários a jusante (*“Downstream Users – DUs”*) da cadeia química produzir, colocar no mercado ou usar tais substâncias de forma que elas não afetem a saúde humana e o meio ambiente. Sendo assim, todas as substâncias químicas exportadas para a União Européia em quantidades acima de uma tonelada estão sujeitas ao registro.

As definições do que se considera necessário de registro segundo o regulamento são:

- Substâncias químicas: elemento químico e seus compostos no estado natural ou obtido por qualquer processo de manufatura incluindo qualquer aditivo necessário para manter sua estabilidade e qualquer impureza derivada do processo utilizado, mas excluindo qualquer solvente que pode ser separado sem afetar a estabilidade da substância ou mudando sua composição
- Preparações: uma mistura ou solução composta de duas ou mais substâncias
- Artigos: objeto que durante a produção recebe uma forma especial, superfície ou desenho que determinam de sua função, em maior grau do que a substância química nele presente

Existem exceções, conforme estabelecido no Artigo 2 do Capítulo I. São isentas de registro substâncias radioativas; substâncias numa preparação ou em um artigo que estejam sob a guarda aduaneira, desde que não sofram nenhum tratamento ou processamento, que estejam em armazenamento temporário ou em uma zona alfandegária livre, em trânsito ou à espera de reexportação; intermediários não isolados; transporte de substâncias perigosas e substâncias perigosas em preparações perigosas quando transportadas; substâncias que ocorrem na natureza e que não foram quimicamente modificadas; gases nobres, petróleo bruto, polpa de celulose, etc...

Resíduo não é considerado substância, preparação ou artigo, dentro das definições estabelecidas no artigo 3, sujeitando-se a outra legislação. Além disso, certas substâncias já cobertas por legislação específica, que contenham requisitos semelhantes aos do REACH, estarão isentas, como, por exemplo, produtos medicinais, aditivos para alimentos, etc.

Polímeros estão isentos de registro e avaliação, mas podem estar sujeitos à autorização e à restrição. Monômeros, contidos em polímeros produzidos ou exportados em quantidades acima de uma tonelada, caso ainda não tenham sido registrados para tal uso ao longo da cadeia, deverão ser registrados atendendo a duas condições:

- O polímero consiste de 2% peso sobre peso ou mais de tal monômero ou de outras substâncias na forma de unidades monoméricas, e de substâncias quimicamente ligadas

- A quantidade total deste monômero ou outras substâncias perfazem 1 tonelada ou mais por ano

De acordo com o REACH, metais também são considerados como substâncias, portanto precisam ser registrados. Os minerais e minérios são isentos de Registro, a não ser quando modificados quimicamente. Ligas metálicas são preparações especiais, cujas propriedades nem sempre são semelhantes às dos componentes. Como preparações, as ligas metálicas não estão sujeitas ao registro, mas os metais com as quais são feitas, estão sujeitos ao registro, se fabricados ou importados acima de 1 tonelada/ano.

Os intermediários só deverão ser registrados se forem exportados separadamente, como uma substância à parte. Para intermediários produzidos na União Européia, os critérios são diferentes.

Um usuário de uma substância química, cujo uso não tenha sido registrado pelo fabricante da substância, tem dois caminhos a seguir:

- Solicitar ao próprio fabricante que registre aquele novo uso;
- Consultar o regulamento e verificar como fazer o registro do uso, no caso específico, se por razões estratégicas, como confidencialidade, não quiser informar ao fabricante o novo uso.

Substâncias químicas presentes em outros produtos ("artigos", na linguagem do regulamento) e cuja liberação seja intencional deverão ser registradas quando produzidas ou importadas em quantidade superior a uma tonelada por produtor ou importador, por ano. O exportador de um artigo que contenha alguma substância presente na lista de substâncias sujeitas à autorização precisa estabelecer se a concentração da substância no artigo está acima de 0,1%. Neste caso, a substância estará sujeita apenas à notificação.

A lista de substâncias isentas de registro encontra-se no apêndice A1.

Fabricantes na União Européia e exportadores terão o mesmo tratamento. A indústria química terá obrigação de fornecer dados sobre seus produtos aos clientes.

O *downstream user*, mencionado no texto anteriormente, é qualquer pessoa singular ou coletiva estabelecida na Comunidade, que não seja o fabricante nem o importador e que utilize uma substância, isolada ou numa preparação, no exercício das suas atividades industriais ou profissionais. Um distribuidor ou um consumidor não é um utilizador a jusante. Um re-importador

isento nos termos do n.º 2, alínea c, do artigo 4.º, será considerado um utilizador a jusante. Podem ser produtores de artigos que utilizam substâncias químicas, como componentes eletroeletrônicos; podem ser formuladores, como no caso dos fabricantes de tintas, etc. Eles deverão considerar o uso seguro da substância química, com base na informação recebida de seus fornecedores e aplicar medidas de avaliação de risco. O fornecedor terá de estar em contato permanente com seu cliente. Os usos das substâncias deverão estar previstos na FISPQ (Ficha de Informações de Segurança de Produto Químico).

A União Européia entendeu que, a partir de agora, o fabricante deverá ser o responsável por reunir, produzir e difundir informações sobre as propriedades e os riscos de utilização das substâncias químicas para que sejam utilizadas assegurando a máxima proteção da saúde e do meio ambiente. Isto inclui a realização de testes demonstrando que as substâncias são seguras, caso esses ainda não tenham sido realizados, além da divulgação das informações com transparência para o consumidor.

II.2 – Características gerais e obstáculos a serem vencidos

Para administrar exclusivamente essa nova política, foi criada a ECHA (Agência Européia de Produtos Químicos). Sediada em Helsinque, na Finlândia, a agência será a responsável pelo processo de registro e exercerá um papel de apoio à Comissão Européia, aos Estados Membros e a todos os participantes envolvidos na implementação do regulamento. Além disso, será de sua responsabilidade o pleno funcionamento do banco de dados e de todo sistema de tecnologia da informação. A agência terá poderes de decisão, mas suas decisões poderão ser contestadas, cabendo recurso a um órgão estabelecido para tal.

A ECHA tem a responsabilidade de desenvolver metodologias e ferramentas de implementação, chamadas “Projeto de Implementação do REACH” (*REACH Implementation Project*), ou simplesmente RIPs, que possibilitem a implementação do novo regulamento. As RIPs podem ser vistas a seguir:

- RIP 1: Processo de descrição do REACH
- RIP 2: Desenvolvimento de um sistema instituído para dar suporte à implementação do REACH (REACH-IT)
- RIP 3: Guia de documentos para a indústria (Guia dos documentos necessários para preparação do dossiê técnico para registro (inclusive os anexos))

- RIP 4: Guia de documentos para as autoridades (avaliação do dossiê, avaliação das substâncias)
- RIP 5 e 6: Instalação da Agência
- RIP 7: Preparo de novas tarefas da comissão
- RIP 8: Normas operacionais da Agência

Sendo assim, foram estabelecidas sete áreas principais, que estarão cobertas pelos RIPs. Para a elaboração dos projetos foram feitas licitações, sendo que algumas ainda estão em andamento. O principal para a indústria é o chamado RIP 3, cujo escopo é o desenvolvimento de guias para facilitar a implementação do REACH, cuja descrição mais detalhada pode ser vista na figura II.1 a seguir.

RIP 3 – Documentos de Orientação para a Indústria

RIP 3.1: Guia sobre Registro –

- Guia para o Registro - reeditado, 3ª Reedição e já se prevê uma 4ª reedição
- Guia para Intermediários - reeditado
- Guia para Monômeros e Polímeros - reeditado
- Guia sobre Pesquisa Científica e Desenvolvimento e Pesquisa e Desenvolvimento Orientadas para Produtos e Processos - reeditado
- Guia para o Navegador

RIP 3.2: Guia para Preparação do Relatório de Segurança Química (CSR – Chemical Safety Report).

RIP 3.3: Guia sobre Requisitos de Informação sobre as Propriedades Intrínsecas das Substâncias

**RIP 3.4: Guia em Compartilhamento de Dados
Guia sobre o Pré-registro**

RIP 3.5: Guia sobre Requerimentos dos Usuários a Jusante

RIP 3.6: Guia sobre Classificação e Rotulagem de Acordo com o Sistema Harmonizado Global (GHS)

RIP 3.7: Guia sobre Preparação do Dossiê para Autorização

RIP 3.8: Guia sobre o Preenchimento dos Requisitos para Artigos.

RIP 3.9: Guia sobre a Elaboração da Análise Sócio Econômica

RIP 3.10: Guia sobre Identificação e Denominação de Substâncias de Acordo com o REACH.

IUCLID 5 - Base de Dados para Uniformização Internacional das Informações sobre Substâncias Químicas

Figura II.1: RIP – Documentos de orientação para a indústria

Fonte: HENRIQUE - 2008

A nova política entrou em vigor em junho de 2007 e possui duas etapas: uma de pré-registro (já finalizada) e outra para o registro definitivo (iniciada em janeiro deste ano).

II.2.1 – O pré-registro

O período de 1º junho a 1º de dezembro de 2008 determinou o recebimento dos pré-registros das substâncias, fase de extrema importância para quem pretende manter relações comerciais com a União Européia.

A empresa que deixou de lado a primeira tarefa, a única “gratuita”, não poderá comercializar seus produtos na UE já em 2009. Se desejar voltar a ter negócios com o bloco europeu, precisará ir direto à fase de registro, que já foi iniciada neste ano, e que levará tempo e dinheiro para ser concluída, em razão dos complexos e dispendiosos testes e das elevadas taxas cobradas.

Se a empresa começou a produzir (ou importar) 1 tonelada ou mais de uma substância química por ano depois de 01 de Dezembro de 2008 (período limite para pré-registro), ela pode usufruir do serviço de *late pre-registration* (pré-registro tardio), disponível no site do ECHA através do software REACH-IT.

Este benefício não se aplica a empresas que tenham perdido o prazo limite para pré-registro de suas substâncias. Estas não poderão continuar produzindo-as (ou importando-as) até que tenham submetido-as ao registro final.

Nesta fase, para que os exportadores tenham conseguido enviar as informações requeridas no prazo determinado, eles já tiveram que nomear um representante exclusivo (em inglês, *only representative*), estabelecido na UE. Apesar de parecer simples, é uma das maiores dificuldades para o cumprimento do REACH. É difícil encontrar pessoas físicas ou jurídicas interessadas em oferecer os serviços, já que esse representante precisa entender tecnicamente das substâncias, além de se tornar o responsável legal pelos produtos importados e passar a deter todas as informações técnicas. Em virtude da importância do serviço, tende a ser caro e de complicado entendimento.

No caso das empresas que possuem filiais no país, a maioria das matrizes das multinacionais se responsabilizará pelo registro. Um “escritório de vendas” localizado na UE, que atua somente como uma espécie de facilitador, transmitindo pedidos de um comprador para um fornecedor (e que é pago por este serviço), **NÃO** pode ser considerado responsável pela introdução física das mercadorias na UE, não podendo ser um *only representative*.

Em uma análise mais simplista, o mais lógico seria o importador, seja ele um produtor ou mais comumente um distribuidor europeu, se tornar o *only representative*. Mas aí está havendo muita resistência dos exportadores por eles não quererem ficar na mão de apenas um *trader*, o que pode limitar a área de atuação comercial na Europa (HENRIQUE, 2008). Uma alternativa melhor, porém difícil de se conseguir, seria obter um representante mais independente comercialmente, como um profissional aposentado da indústria química que se estabelecesse quase que de forma exclusiva para operar nos assuntos regulatórios do REACH, pois um *only representative* deve possuir conhecimento suficiente na manipulação das substâncias, bem como as informações relacionadas às substâncias necessárias para satisfazer todas as obrigações de registrante.

Apesar da aparente despreocupação da indústria brasileira, existe uma expectativa com a implementação das novas leis, o que cria um cenário de tensões vindas de todas as partes.

De forma prática, o desconhecimento sobre o tema, associado a um descuido das autoridades governamentais, que não planejaram corretamente ações informativas ou executivas de forma a apoiar as empresas brasileiras em seus esforços de adequação às novas regras já pode ter impactado seriamente várias empresas nacionais, que deixaram de fazer o pré-registro, tanto por não conseguirem um representante legal a tempo como por outros motivos, tais como esquecer de incluir alguma substância ou se equivocar na interpretação da complicada regulamentação. A longo prazo, o cenário projetado deve ser, em primeiro lugar, a perda de competitividade de vários setores da indústria nacional que negociam com a Europa. Produtores europeus de artigos, preparações e especialidades vão comprar substâncias já registradas de europeus, sem precisar arcar com os custos, enquanto os estrangeiros serão obrigados a ter seus próprios registros para exportar os mesmos produtos.

E se os exportadores brasileiros descartarem o comércio com o continente europeu e tentarem manter suas exportações em outras regiões do mundo, terão futuramente as mesmas dificuldades. Isso porque a regulamentação europeia, na previsão de muitos especialistas, deve servir no futuro de modelo para uma harmonização global de controle de substâncias químicas. Isso, aliás, já ameaça ocorrer. Em 18 de março de 2008, os Estados Unidos lançaram um programa de controle de substâncias químicas, denominado CHAMP (*Chemicals Assessment and Management Program*), desenvolvido com a ajuda do EPA, em parceria com Canadá e México e também conhecido como *Montebello Agreement*. A promessa dos três países é tornar o programa uma alternativa ao REACH. Até 2012, será finalizada etapa de caracterização de risco de mais de nove mil substâncias produzidas em quantidades superiores a 11,3 toneladas por ano.

Os próprios europeus, que são menos afetados, já alertam para impactos que também poderão ocorrer na economia da própria Europa, pois os gastos necessários para o atendimento integral de todas as exigências são altíssimos. De acordo com previsões de especialistas as empresas européias desembolsarão de 10 a 12 bilhões de euros por ano para atender o REACH nos próximos doze anos. As empresas de pequeno e médio porte possivelmente serão as mais afetadas, revelando assim um cenário futuro de muitas dificuldades para as indústrias.

Há ainda problemas de comunicação no REACH. A legislação do REACH é extremamente exigente e muito complexa, com constantes referências a outras normas européias. É difícil compreender o todo pelo fato da legislação ainda não estar completa, sendo editada e reeditada freqüentemente.

Na opinião de alguns especialistas o REACH carece de clareza em pontos importantes. Os guias de implementação, embora tenham sido elaborados para facilitar a aplicação da lei, em alguns casos têm se mostrado de difícil interpretação. Os guias contêm explicações que podem criar dubiedade de interpretação.

Alguns exemplos deste tipo de dificuldade serão citados a seguir. Muitas vezes é difícil nomear uma substância seguindo os critérios estabelecidos pelos guias. Um dos motivos de dúvida é a regulamentação afirmar que as impurezas de uma substância não são consideradas como parte de sua constituição química, quando presentes em um percentual de até 20%, portanto não precisam ser registradas. Porém, elas precisam ser identificadas pelas fórmulas moleculares e por seus números de identificação. Isso tem criado receio e confusão nas empresas, que não sabem se revelam ou se resolvem logo registrar as impurezas, caso o percentual delas supere os 20%. Somente impurezas inferiores ou iguais a 1% não precisam ser especificadas

Outro ponto que não está claro ainda é quando uma preparação passa a ser um artigo. Para considerar um artigo, a regulamentação afirma que o objeto precisa ter design, forma ou superfície mais importante para seu uso normal do que sua composição química. Para qualificar uma preparação, o REACH usa raciocínio similar, ou seja, o objeto assim considerado será aquele que contar com composição química mais importante para seu uso do que sua forma, superfície ou design. A aparente simplicidade da legislação esconde uma armadilha (WAHLSTRÖM, 2008). Caso o produto for classificado de forma errônea segundo a ECHA pela empresa registrante, o dossiê perde a validade e o registro não será aceito, o que trará mais gastos financeiros e menos tempo para se obter o registro.

Outro exemplo é o guia de implementação para artigos industrializados, um dos temas mais polêmicos da regulamentação. No regulamento é considerado um artigo “qualquer objeto a que foi dado uma forma específica, superfície ou design para um propósito específico”. Artigos podem ser manufaturados como carros, têxteis e chips eletrônicos. Desta forma a questão do custo, com suas complicações burocráticas e investigatórias, deve afetar toda a sociedade, uma vez que não será apenas a indústria a única a arcar com as conseqüências do REACH. Tendo estes produtos a obrigação do registro, quando colocados no mercado, o consumidor acabará sendo atingido financeiramente, uma vez que estes produtos estarão majorados devido ao custo de terem sido registrados. Conseqüentemente as vendas/exportações feitas pelo país não europeu para UE correrão o risco de diminuir pela falta de demanda.

Previsões nada otimistas dão conta de que o custo para registrar apenas uma substância, levando-se em consideração as taxas de registro de cerca de 30 mil euros por substância. Se incluirmos as dezenas de testes exigidos (testes físico-químicos, toxicológicos e ecotoxicológicos), para cada uma delas ter o seu uso seguro comprovado, sendo assim passível de registro no REACH (tabela II.1 a seguir), os custos de registro, para cada substância, devem chegar à casa dos 2,8 milhões de euros.

Número de estudos *	Testes físico-químicos	Testes de toxicidade	Testes de ecotoxicidade
1-10	12	5	3
10-100	12	14	9
100-1000	15	18	23
>1000	15	24	30

Fonte: C.E.S.

* Os números de testes contidos na tabela equivalem à quantidade total de testes listados nos anexos correspondentes. Um programa real de testes pode consistir de menos testes, caso alguns testes sejam considerados desnecessários devido a razões especificadas no texto do Regulamento

Tabela II.1: N° de testes necessários para cada faixa de quantidade comercializada na UE

Fonte: C.E.S.

O REACH não estabelece quais laboratórios deverão ser utilizados, e deixa a critério da indústria escolhê-los, desde que sejam reconhecidos ou designados no âmbito do REACH. Novos testes e análises toxicológicas e ecotoxicológicas devem ser efetuados de acordo com as Boas Práticas de

Laboratório. Nestas condições, laboratórios brasileiros que cumpram essas exigências serão, em princípio, aceitos.

No regulamento existe uma listagem com os métodos de ensaios físico-químicos, toxicológicos e ecotoxicológicos, nomeados no apêndice A2 do presente trabalho.

Mesmo que exista a formação de consórcios para diluir os gastos, trata-se de valores muito altos, tendo em vista que o registro é realizado por empresa. Além disso, as corporações dificilmente trabalham apenas com um insumo químico, o que multiplicará seus custos para registro. A tabela a seguir relaciona os custos de alguns testes realizados no Brasil.

Preço de Testes no Brasil

ÁREA	DESCRIÇÃO	Laboratório A		Laboratório B	
		BPL (R\$)	Não BPL (R\$)	BPL (R\$)	Não BPL (R\$)
Toxicologia	Toxicidade oral aguda para ratos	2800	750	3100	683
	Toxicidade Inalatória aguda para ratos	7.200,00	3.000,00	-	-
	Toxicidade cutânea aguda para ratos	2800	750	-	-
	Irritação/corrosão Cutânea Aguda em coelhos	2800	750	3100	520
	Irritação/Corrosão Ocular Aguda em coelhos	2800	750	3100	520
Mutagenicidade	Procarionóticos - Teste de Ames (5 cepas)	5700	2900	7900	5290
	Eucarióticos - Micronúcleo	5780	3800	-	-
Ecotoxicologia água doce	Toxicidade aguda para algas CE50 72 horas	3600	1000	-	-
	Toxicidade aguda para microcrustáceos (Daphnia magna) CE 50 48 horas	2800	650	-	-
	Toxicidade aguda para peixes (Danio rerio); CL50 96 horas	3600	720	5460	891
	Toxicidade Crônica com Ceriodaphnia dubia (7 dias)	3500	950	-	-
	Toxicidade Crônica com peixe Pimephales promelas (7 dias)	3500	950	-	-
Biodegradabilidade	Biodegradabilidade imediata	-	-	4000	893

Tabela II.2: Preço de testes no Brasil

Fonte: HENRIQUE, 2008

Há também os custos indiretos, ainda mais significativos e difíceis de mensurar, como pagamento do representante exclusivo, consultoria, viagens e impostos pagos no Brasil, o que pode caracterizar uma barreira não-tarifária importante, principalmente porque as empresas européias não estarão sujeitas aos mesmos gastos (HENRIQUE, 2008).

Fazer-se representar legalmente na Europa também será um problema recorrente e, com certeza, um custo a mais, entre tantos outros embutidos no REACH. De forma unânime entre os especialistas, a melhor forma para tentar minimizar não só os gastos como os problemas burocráticos e técnicos advindos da representação seria o país exportador se unir. E nesse caso a participação dos governos parece ser essencial.

Um exemplo dessa necessidade é a China, que inaugurou um escritório de representação para suas indústrias em Helsinque. O escritório, que conta com o apoio do Ministério da Indústria e Comércio chinês, foi denominado CCCMC, sigla para câmara de comércio para importadores de metais, minerais e químicos. O órgão, com 200 funcionários, representará legalmente 4 mil companhias dos setores químico e metalúrgico. Trata-se do primeiro país a tomar uma decisão como esta, mas cujo pragmatismo deve colocar a China na dianteira das negociações do REACH. E outros países, como Brasil, Estados Unidos, Japão, Canadá, Coréia do Sul e Índia, também estudam a possibilidade.

II.2.2 – O registro

A segunda etapa (registro) foi dividida em fases, com base em dois amplos critérios: quantidade colocada no mercado (produzida ou importada) e risco à saúde e ao meio ambiente.

Para as substâncias distribuídas em grandes volumes nos países europeus (1.000 toneladas ou mais por ano por fabricante do bloco ou importador) e para as classificadas como de "grande preocupação", independentemente da quantidade, o registro deve acontecer até 30 de novembro de 2010. Em seguida, terão de ser registradas até 31 de maio de 2013 as substâncias comercializadas em volumes de 100 a 1000 toneladas/ano e por último, até 31 de maio de 2018 terão de ser registradas as substâncias comercializadas em volumes de 1 a 100 toneladas/ano (figura II.2). O cronograma foi concebido para que as pequenas e médias empresas, que em teoria produzem quantidades menores, tenham mais tempo para se adequar.

Figura II.2: Cronograma das etapas do REACH

Fonte: Informativo CRQ-IV

Os administradores do sistema ressaltam que o pré-registro não foi obrigatório. Contudo, a empresa que não cumpriu com esse requisito não poderá valer-se dos prazos dilatados para o registro definitivo, além de ter a comercialização de seus produtos suspensa até que sejam concluídos os testes de certificação. O pré-registro permite que o produtor ou importador continue comercializando seus produtos (e as substâncias contidas) pelo período necessário ao registro.

Em janeiro deste ano, a ECHA colocou em seu site a lista de todas as substâncias para as quais foram realizados o pré-registro (mais de 60 mil), e esta encontra-se em anexo na versão digital do presente trabalho.

Para o início da fase de registro, as empresas registrantes vão contar com um software desenvolvido pela ECHA para administrar os trabalhos. Trata-se do IUCLID (*International Uniform Chemicals Information Database* - Base de Dados Internacional de Informação Uniformizada sobre as Substâncias Químicas), ferramenta que permitirá a criação, o gerenciamento, armazenagem e o transporte de dados e dossiês requeridos para a empresa cumprir as exigências do REACH. O software está disponível no site da ECHA para download gratuito desde o ano retrasado, mas não foi necessário para o pré-registro.

Este registro é totalmente automatizado. Caberá à indústria certificar-se de que as informações necessárias ao registro estejam completas, o que poderá ser feito com o auxílio de ferramenta dentro do sistema. Tal ferramenta permitirá verificar se as informações requeridas estão completas, antes de encaminhar o dossiê para a agência. Em retorno, a agência enviará o aviso de recebimento eletrônico, o que não significa que o dossiê tenha sido aceito. Haverá casos em que a agência poderá rejeitar o pedido de registro, depois de uma verificação.

Para o pré-registro, foi usado um outro software para auxílio na web: o REACH-IT. Além de ter servido para essa etapa, ele será usado para organizar uma base de dados dos dossiês técnicos das substâncias químicas enviados para auxiliar o registro. Por ele, o interessado poderá acessar dados não-confidenciais de substâncias de outras empresas, que tenham referência com seus interesses de registro, além de consultar os seus próprios documentos.

Caso o registrante considere sensíveis algumas das informações prestadas à agência, ele poderá requerer que algumas partes da informação sejam consideradas confidenciais. Neste caso, tais informações só seriam divulgadas em situações de emergência. A agência poderá concordar com tal pedido ou negá-lo. A estrutura do REACH-IT permite proteger ou tornar pública a informação.

Caberá a empresa interessada avaliar qual a melhor estratégia a ser adotada. Um *only representative* pode representar um ou vários fabricantes localizados fora da UE e que exportam para a Comunidade.

Muitas empresas já dispõem de dados sobre as substâncias que fabricam, mas mantêm tais dados restritos para seu próprio uso. O registro, de acordo com o REACH, permitirá que os dados existentes se tornem públicos e sejam efetuados testes com o intuito de gerar informação para as substâncias com pouca ou nenhuma informação. O pré-registro é público. Após a constituição dos dossiês a Agência criou fóruns denominados SIEF (*Substance Information Exchange Forum*), em que as informações sobre o pré-registro estarão disponíveis, permitindo a identificação dos registrantes, que poderão assim trocar informações.

A idéia é juntar os utilizadores de idênticas substâncias e elaborar os estudos toxicológicos, para obter um consenso técnico e reduzir os custos das análises. Estes fóruns foram abertos na internet em janeiro de 2009. No caso de necessidade de testes em animais, a Comissão obriga o registrante a fazer parte de um consórcio, com o objetivo de reduzir o número de animais sacrificados. Os testes com vertebrados deverão ser autorizados pela Agência.

Para os demais casos, dentro do princípio “uma substância um registro” os fabricantes são encorajados a participar de consórcios e só em casos especiais poderão optar por não compartilhar suas informações. Vale lembrar que, embora o princípio “uma substância um registro” esteja sendo aplicado, cada fabricante deverá submeter sua própria solicitação de registro.

II.2.3 – A avaliação

Após o registro existe a Avaliação. Como foi dito anteriormente, a verificação do dossiê é apenas uma checagem eletrônica. Não há julgamento de mérito. No primeiro momento, será apenas avaliado se os formulários foram devidamente preenchidos. Se o produtor ou importador preencheu todos os campos necessários, a Agência emite um número de protocolo. Estima-se que 5% das substâncias, cujos registros forem solicitados, estarão submetidas à avaliação pela Agência. A Agência desenvolverá critérios estabelecendo prioridade para avaliação. A priorização será baseada em risco.

II.2.4 – A autorização

A autorização será a respeito das substâncias consideradas de grande preocupação por seus efeitos na saúde humana ou no meio ambiente. Estas só continuarão no mercado se tiverem seus usos autorizados. A autorização não é mais uma das etapas de registro. A autorização é um processo à parte. O procedimento é diferente. Neste caso, não se aplica o limite de uma tonelada. A produção ou a importação de substâncias colocadas na lista deverá ser autorizada por um procedimento detalhado e, em alguns casos, poderá incluir um plano de substituição da substância. Caberá a um estado parte da União Européia preparar um dossiê sobre a substância, antes que ela seja colocada na lista de candidatas à autorização. A autorização será concedida por uso. Caso um determinado uso não tenha sido autorizado, a substância não poderá ser utilizada. As substâncias que estão sujeitas a essa autorização são as substâncias CMR (carcinogênicas, mutagênicas ou que causem danos ao aparelho reprodutor), PBTs (persistentes, bioacumulativas e tóxicas) e vPvBs (muito persistentes e muito bioacumulativas) e outras semelhantes. Aproximadamente 1.500 substâncias estarão submetidas à autorização. Foi publicado no regulamento um anexo com uma lista das substâncias que serão submetidas à autorização e está em constante atualização (tabela II.3).

Candidate List of Substances of Very High Concern for authorisation

The identification of substances as Substances of Very High Concern and its inclusion in the Candidate List is the first step in the [procedure concerning authorisation](#).
There are [immediate obligations](#) for companies linked to the substances on the Candidate List.

Substance identification		Substance composition	Date of inclusion	Reason for inclusion	Supporting documentation	Decision number
Substance name	EC (CAS No.)	Impurities (where relevant for C&L, PBT/vPvB)				
Triethyl arsenate	427-700-2	-	28.10.08	Carcinogenic (article 57a)	(annex XV rep.)	ED/67/2008
Anthracene	204-371-1	-	28.10.08	PBT (article 57d)	(support doc.)	ED/67/2008
4,4'-Diaminodiphenylmethane (MDA)	202-974-4	-	28.10.08	Carcinogenic (article 57a)	(support doc.)	ED/67/2008
Dibutyl phthalate (DBP)	201-557-4	-	28.10.08	Toxic for reproduction (article 57c)	(support doc.)	ED/67/2008
Cobalt dichloride	231-689-4	-	28.10.08	Carcinogenic (article 57a)	(support doc.)	ED/67/2008
Diarsenic pentaoxide	215-116-9	-	28.10.08	Carcinogenic (article 57a)	(support doc.)	ED/67/2008
Diarsenic trioxide	215-481-4	-	28.10.08	Carcinogenic (article 57a)	(support doc.)	ED/67/2008
Sodium dichromate	234-190-3 (7789-12-0 and 10580-01-9)	-	28.10.08	Carcinogenic, mutagenic and toxic to reproduction (articles 57a, 57b and 57c)	(support doc.)	ED/67/2008
5-tert-butyl-2,4,6-trinitro-m-xylene (musk xylene)	201-329-4	-	28.10.08	vPvB (article 57e)	(support doc.)	ED/67/2008
Bis (2-ethylhexyl)phthalate (DEHP)	204-211-0	-	28.10.08	Toxic to reproduction (article 57c)	(support doc.)	ED/67/2008
Hexabromocyclododecane (HBCDD) and all major diastereoisomers identified:	247-148-4 and 221-695-9	-	28.10.08	PBT (article 57d)	(support doc.)	ED/67/2008
Alpha-hexabromocyclododecane	(134237-50-6)	-				
Beta-hexabromocyclododecane	(134237-51-7)	-				
Gamma-hexabromocyclododecane	(134237-52-8)	-				
Alkanes, C10-13, chloro (Short Chain Chlorinated Paraffins)	287-476-5	-	28.10.08	PBT and vPvB (article 57d - e)	(support doc.)	ED/67/2008
Bis(tributyltin)oxide (TBTO)	200-268-0	-	28.10.08	PBT (article 57d)	(support doc.)	ED/67/2008
Lead hydrogen arsenate	232-064-2	-	28.10.08	Carcinogenic and Toxic to reproduction (articles 57a and c)	(support doc.)	ED/67/2008
Benzyl butyl phthalate (BBP)	201-622-7	-	28.10.08	Toxic to reproduction (article 57c)	(support doc.)	ED/67/2008

Tabela II.3: Lista de candidatas a substâncias de grande preocupação para autorização

Fonte: Retirado do site http://echa.europa.eu/chem_data/candidate_list_table_en.asp em 31/03/2009

II.2.5 – A restrição

Certas substâncias, a exemplo do que já ocorre hoje, poderão ter seu uso restrito na União Européia. As propostas para restringir o uso de uma substância podem vir de um Estado Membro ou da própria Comissão. A restrição será baseada nas avaliações de risco apresentadas. A agência, com base nas avaliações, imporá ou não a restrição à substância. Existe um anexo com uma extensa lista de substâncias que tem algum tipo de restrição de uso. A Agência poderá incluir ou retirar produtos e usos nesta lista.

As listas de produtos restritos e de grande preocupação encontra-se anexada na versão digital deste estudo.

O texto completo da nova política encontra-se disponível em todos os idiomas oficiais da União Européia, inclusive em português, nos endereços: <http://echa.europa.eu/> ou <http://ecb.jrc.it/reach/> ou <http://eur-lex.europa.eu>

Capítulo III – A indústria química

Diversos segmentos industriais compõem a Indústria Química, como produtos farmacêuticos, defensivos agrícolas, produtos petroquímicos, tintas, cosméticos entre outros.

Fornecedora de matérias-primas e produtos para todos os setores produtivos, da agricultura ao aeroespacial, a indústria química desempenha relevante papel na economia. No Brasil, é o segundo setor em importância na formação do PIB Industrial.

A classificação utilizada no presente trabalho segue a orientação da ABIQUIM, que associa a indústria química a 17 capítulos, em todo ou em parte, na classificação da NCM (Nomenclatura Comum do MERCOSUL).

A tabela a seguir compara os dados de exportação brasileira mundial e para União Europeia no ano de 2008 e no primeiro bimestre de 2009, referente a estes capítulos.

Capítulo NCM	Descrição do Capítulo NCM	2008			2009		
		Geral (US\$)	União Européia (US\$)	% para UE	Geral (US\$)	União Européia (US\$)	% para UE
15	Gorduras, óleos e ceras animais ou vegetais, etc.	2992013277	742900797	24,8	165732590	25331168	15,3

Tabela III.1: Dados de exportação por Capítulos NCM referentes à indústria química brasileira no ano de 2008 e no primeiro bimestre de 2009

Fonte: Elaboração própria (Dados ALICE Web, MDIC)

É apresentada no apêndice A3 a mesma tabela incluindo todos os outros capítulos da NCM.

Da tabela III.1 pode-se concluir que:

- Do total de produtos exportados pelo Brasil, 23,4% (em 2008) e 24% (no primeiro bimestre de 2009) destinaram-se a UE;
- Do total de produtos exportados pelo Brasil, os produtos químicos corresponderam a 18,4% em 2008 e 15,1% no 1º bimestre de 2009;
- Do total de produtos químicos exportados, 16,4% (em 2008) e 19,5% (em 2009) foram para a União Européia;
- Do total de produtos exportados para a UE, 12,9% (2008) e 12,2% (2009) foram de produtos químicos;

- Dentre os produtos químicos exportados pelo Brasil, 1,7% (2008) e 2,6% (2009) foram de produtos cosméticos;
- Dentre os produtos químicos exportados para a UE, 1,9% (2008) e 1,6% (2009) foram do setor cosmético;
- Do total de produtos cosméticos que o Brasil exportou, 18,6% (2008) e 11,8% (2009) foram para a UE.

III.1 – A indústria de higiene pessoal, perfumaria e cosméticos

A indústria de Higiene Pessoal, Perfumaria e Cosméticos é um dos setores que compõem a indústria química, conforme visto anteriormente. Por ser um setor em expansão, de grande interesse no mercado mundial, este foi escolhido como objeto de estudo do presente trabalho.

A Agência Nacional de Vigilância Sanitária (ANVISA), através da Resolução RDC nº. 211, de 14 de julho de 2005, define como sendo produtos de higiene pessoal, cosméticos e perfumes, preparações constituídas por substâncias naturais ou sintéticas, de uso externo nas diversas partes do corpo humano, pele, sistema capilar, unhas, lábios, órgãos genitais externos, dentes e membranas mucosas da cavidade oral, com o objetivo exclusivo ou principal de limpá-los, perfumá-los, alterar sua aparência e ou corrigir odores corporais e ou protegê-los ou mantê-los em bom estado.

Essa definição é semelhante às adotadas tanto no MERCOSUL, quanto pela União Européia, pela Resolução nº. 31 de 1995 e, devido a essa semelhança, a exportação de produtos brasileiros é favorecida.

Alguns autores utilizam o termo Indústria de Higiene Pessoal, Perfumaria e Cosméticos (HPPC). Neste trabalho será utilizado o termo Indústria de Cosméticos para englobar todas as categorias citadas.

O setor é dividido em 4 categorias e 2 grupos de risco, de acordo as Resoluções 79/2000 e 335/1999.

Categorias:

1. Produtos para higiene pessoal: sabonetes, produtos para higiene oral, desodorantes, absorventes higiênicos, produtos para barbear, fraldas descartáveis, talcos, produtos para higiene capilar etc.
2. Cosméticos: produtos de coloração e tratamento de cabelos, fixadores e modeladores, maquiagem, protetores solares, cremes e loções para pele, depilatórios etc.
3. Perfumes: perfumes e extratos, águas de colônias, produtos pós-barba etc.
4. Produtos para bebês.

A ANVISA ainda classifica os produtos cosméticos de acordo com o nível de risco para o usuário, em função da probabilidade de ocorrência de efeitos não desejados decorrentes do uso inadequado do produto, sua formulação, finalidade de uso, áreas do corpo a que se destinam e cuidados a serem observados durante o uso:

- Risco nível 1: Produtos que possuem propriedades básicas ou elementares, cuja comprovação não seja inicialmente necessária, e não requeiram informações detalhadas quanto ao seu modo de usar e suas restrições de uso, devido às características intrínsecas do produto. Risco mínimo.
Ex: maquiagem, perfumes, sabonetes, xampus, cremes de barbear, escovas dentais, cremes de beleza, etc...

- Risco nível 2: Produtos que possuem indicações específicas, que exigem comprovação de segurança e/ou eficácia, assim como informações e cuidados, modo e restrições de uso. Risco potencial. Esses produtos estão sujeitos a cumprir requisitos técnicos mais severos antes de poderem ser comercializados.

Ex: xampus anticaspa, cremes dentais anticárie e antiplaca, desodorantes íntimos femininos, desodorantes de axilas, esfoliantes químicos para a pele, protetores labiais, filtros UV, loções bronzeadoras, descolorantes, clareadores, depiladores, repelentes, tinturas capilares, etc...

Todos os produtos para bebês são classificados como sendo de risco nível 2.

III.1.1 – Panorama do setor cosmético brasileiro e perspectivas

III.1.1.1 – Mercado Interno

Do ponto de vista técnico-produtivo, essa indústria se caracteriza por uma base relativamente simples (manipulação de fórmulas simples).

O mercado é basicamente dominado pelas grandes empresas multinacionais (altamente competitivas), impondo barreiras consideráveis às empresas brasileiras, em geral de pequeno porte (90% delas), devido à constante necessidade de se apresentar novidades ao mercado consumidor. Para isso, grandes somas de recursos são investidas anualmente. Os produtos de higiene e limpeza requerem menor grau de investimento e capacitação técnica.

A participação do Brasil em cada segmento no faturamento do setor em 2005 é apresentada no gráfico a seguir.

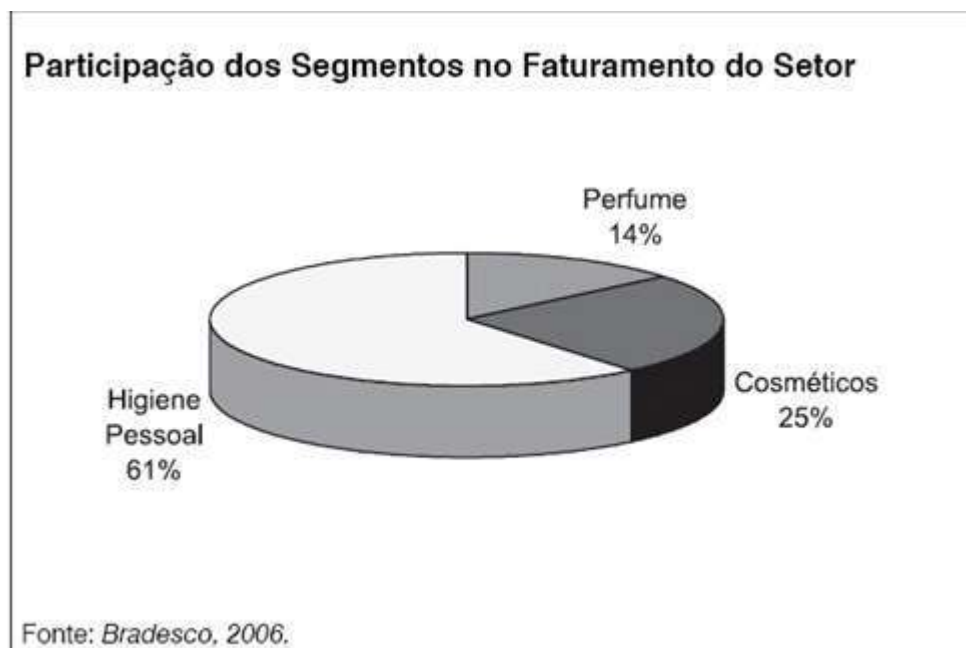

Figura III.1: Participação dos segmentos no faturamento do setor

Fonte: CAPANEMA, 2007

A produção nacional dirige-se basicamente ao atendimento de nosso próprio mercado interno (cerca de 93% das vendas).

Por serem essenciais, os produtos de higiene pessoal diária apresentam um mercado mais amplo e atingem todas as classes da população. Já os produtos dos segmentos de cosméticos e perfumaria atingem às classes mais altas e maior concentração de vendas no fim do ano.

João Carlos Basílio, presidente da Associação Brasileira da Indústria de Higiene Pessoal, Perfumaria e Cosméticos (ABIHPEC), está otimista em relação ao desempenho do setor e acredita na possibilidade dele não ter de enfrentar queda no faturamento em dólar em 2009, caso a moeda permaneça cotada nos níveis atuais (em torno de R\$ 2,35), e, se isso se confirmar, a indústria poderá crescer em 5%.

O mercado mundial de cosméticos atingiu US\$ 290,9 bilhões em 2007 (crescimento de 5,9% em relação a 2006).

O setor cosmético brasileiro vem crescendo a taxas elevadas e fez com que o Brasil aparecesse em terceiro lugar no ranking dos maiores consumidores de produtos cosméticos em 2006, mantendo esse lugar em 2007 (crescimento de 22,6%), atingindo um valor de US\$ 22,2 bilhões.

Segundo dados do Euromonitor de 2008, o Brasil continua na terceira posição do ranking. Sua posição varia em relação a alguns segmentos de produtos: é o primeiro mercado em desodorante; segundo mercado em produtos infantis, produtos masculinos, de higiene oral, produtos para cabelos, proteção solar, perfumaria e banho; quarto em maquiagens; sexto em produtos para a pele e oitavo em depilatórios.

Fonte: Euromonitor.

Devido ao mercado cosmético japonês entrar em recessão, com os dados de 2008 o Brasil está se aproximando do Japão, na segunda posição no ranking dos maiores consumidores de produtos cosméticos, perdendo apenas para os Estados Unidos.

Justamente pela importância do mercado brasileiro e também pelas suas grandes possibilidades de crescimento, as principais empresas mundiais mantêm atividades produtivas e comerciais no país. A perspectiva é de aumento da importância relativa dos países emergentes no ranking.

Os países da União Européia, embora individualmente não apresentem participação tão significativa, quando somados respondem por cerca de 30% do total.

De acordo com dados da ABIHPEC, nos últimos treze anos, o crescimento médio deflacionado composto foi de 10,6% ao ano, tendo passado de um faturamento "ExFactory", líquido de imposto sobre vendas, de R\$ 4,9 bilhões em 1996 para R\$ 21,7 bilhões em 2008, demonstrado no gráfico a seguir. O gráfico não só revela a saúde financeira do setor, mas também traz à tona a perspectiva de continuidade do crescimento em 2009.

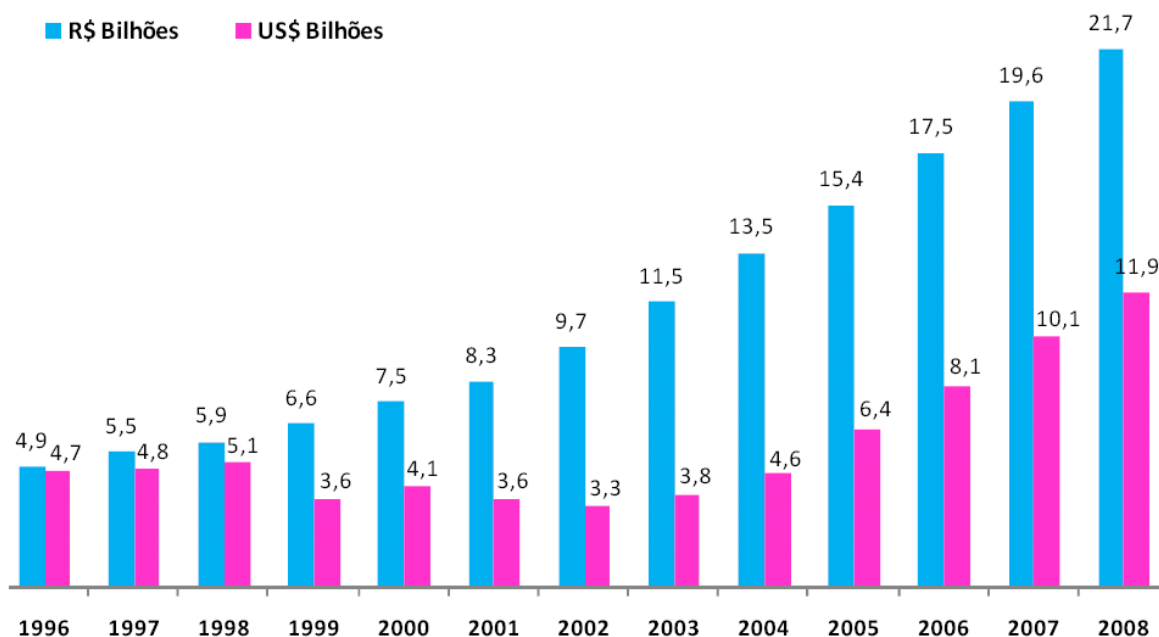

Figura III.2: Crescimento do setor cosmético brasileiro

Fonte: ABIHPEC

A queda das vendas em dólares entre 1999 e 2002 deveu-se a desvalorização do real. A partir de 2003 o real passou novamente a ser valorizado. O forte crescimento das vendas em dólar nos últimos anos foi motivado por esta valorização da moeda brasileira, juntamente com o crescimento deflacionado no mercado interno superior aos dois dígitos. Podem-se apontar algumas razões que, segundo a ABIHPEC, teriam contribuído para o acentuado crescimento desse setor:

- Participação crescente da mulher brasileira no mercado de trabalho;
- Incorporação de novas tecnologias de produção e o conseqüente aumento da produtividade, favorecendo os preços praticados pelo setor, que tem aumentos menores do que os índices de preços da economia em geral;
- Lançamentos constantes de novos produtos atendendo cada vez mais às necessidades do mercado;
- Aumento da expectativa de vida, o que traz a necessidade de conservar uma aparência de juventude.
- Aumento significativo do consumo de produtos cosméticos masculinos.

CRESCIMENTO DO SETOR *versus* CRESCIMENTO DA ECONOMIA

Nos últimos anos o Brasil apresentou baixos índices de crescimento. A tabela abaixo compara a evolução do Produto Interno Bruto, com a da indústria em geral e com os índices da Indústria de Produtos de Higiene Pessoal, Perfumaria e Cosméticos.

VARIÇÃO ANUAL – EM PORCENTAGEM			
ANO	PIB	INDÚSTRIA GERAL	SETOR Deflacionado
1996	2,7	3,3	17,2
1997	3,3	4,7	13,9
1998	0,2	-1,5	10,2
1999	0,8	-2,2	2,8
2000	4,3	6,6	8,8
2001	1,3	1,6	10,0
2002	2,7	2,7	10,4
2003	1,1	0,1	5,0
2004	5,7	8,3	15,0

Tabela III.4: Variação anual PIB x Indústria geral x Setor cosmético

FONTE: IBGE - Banco Central – ABIHPEC * Deflator: Índice IPC FIPE Higiene e Beleza

O setor de cosméticos vem se destacando de forma expressiva ao longo dos últimos 13 anos, apresentando um maior crescimento que o restante da indústria (10,6% de crescimento médio no setor cosmético contra 3,0% do PIB Total e 2,9% da Indústria Geral).

ESTRUTURA E CONCENTRAÇÃO

De acordo com a ANVISA, o número de empresas registradas como fabricantes de cosméticos era 1.494 em janeiro de 2007. Em julho de 2008, esse número aumentou para 1.635, representando um aumento de 9,5%.

O aumento foi um pouco maior nas regiões Nordeste e Centro-Oeste, elevando a participação dessas regiões no total de empresas do setor. Mesmo assim a região Sudeste continua concentrando o maior número de empresas (cerca de 64%), seguida pela região Sul (cerca de 20%).

Número de Empresas de Cosméticos (por região) (jan. de 2007 e jul. de 2008)

Região	Janeiro de 2007		Julho de 2008	
	Número de Empresas	%	Número de Empresas	%
Norte	20	1,3	21	1,3
Nordeste	117	7,8	139	8,5
Centro-Oeste	88	5,9	106	6,5
Sudeste	970	64,9	1.043	63,8
Sul	299	20,0	326	19,9
Total	1.494	100,0	1.635	100,0

Tabela III.5: Número de empresas de cosméticos por região (janeiro de 2007 e julho de 2008)

FONTE: ANVISA

De acordo com o último levantamento, existem atualmente no Brasil 1.694 empresas atuando no setor, sendo 15 delas de grande porte, cujo faturamento líquido de impostos ultrapassa os R\$100 milhões, representando 70,0% do faturamento total. As empresas estão distribuídas por região/estado da seguinte forma:

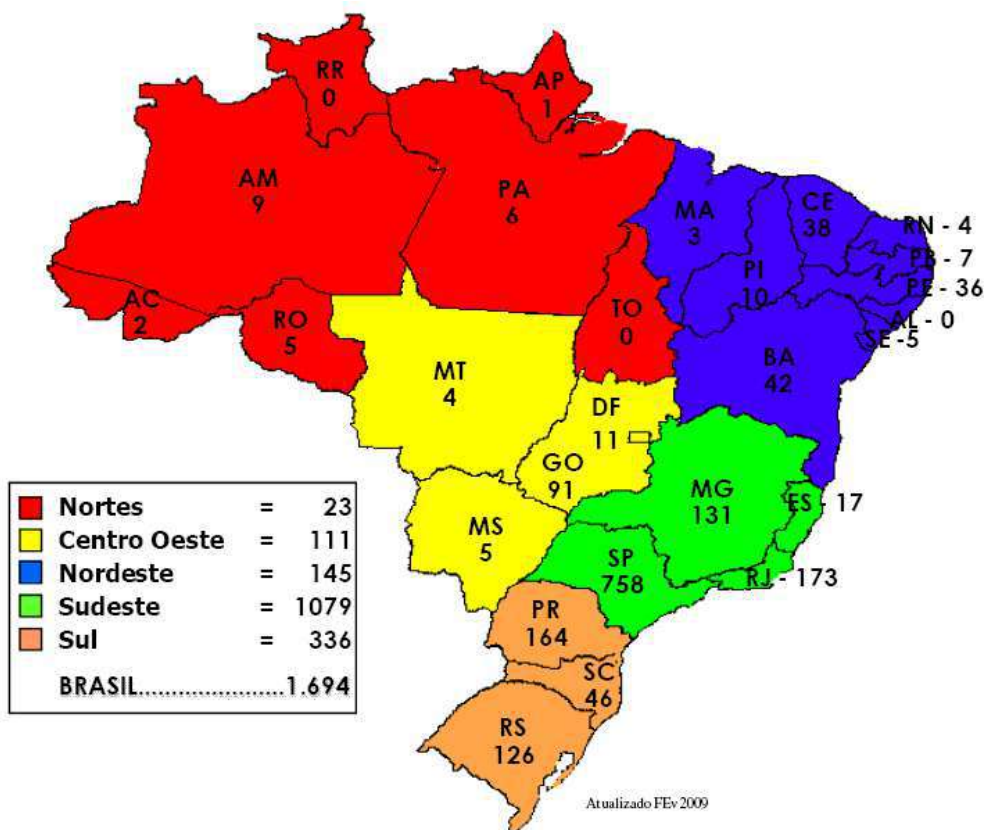

Figura III.3: Número de empresas de cosméticos por estado (fevereiro de 2009)

Fonte: ABIHPEC

III.1.1.2 – Comércio Exterior

Nas exportações o Brasil também tem se destacado, fechando o ano de 2008 com balança comercial positiva em torno de US\$ 186 milhões no setor cosmético (capítulo 33 do NMC). O valor exportado pelo setor foi de cerca de US\$ 619 milhões (exportados para 140 países).

Tabela III.7: Balança comercial brasileira – Capítulo 33 – 2008 (UE)

Fonte: ALICE Web, MDIC

O Brasil, apesar de estar entre os maiores consumidores de produtos cosméticos no mercado mundial, ainda não apresenta uma participação tão significativa no comércio internacional.

A expectativa para 2009 é de colher melhores resultados com as exportações. De acordo com o presidente da ABIHPEC, “as exportações ainda podem avançar muito porque os consumidores do Primeiro Mundo vão precisar de produtos de alta qualidade a preços acessíveis”. (BASÍLIO, 2009)

Os baixos fluxos de comércio exterior são explicados pelos motivos já citados anteriormente: presença de grandes empresas de cosméticos e multiplicidade de estabelecimentos de pequeno porte capazes de ofertar produtos adaptados ao padrão de consumo dos brasileiros.

As micro e pequenas empresas, de acordo com dados do SEBRAE, respondem por apenas 2% do valor total das exportações brasileiras.

Isso significa que o mercado doméstico é o principal alvo da indústria brasileira e é capaz de atender quase à totalidade da demanda típica do mercado consumidor nacional. Por isso a demanda por produtos importados é baixa.

III.1.2 – Panorama mundial

A exportação de produtos Cosméticos é importante na pauta de diversos países, sendo os países desenvolvidos os principais exportadores mundiais. A Tabela abaixo mostra os principais países, destacando-se a França, que em 2007 ultrapassou a casa de US\$ 13 bilhões em exportações, o que representou um *market-share* de cerca de 21%.

Principais Países Exportadores de Cosméticos (2006 e 2007)

2006			2007		
País	Valor (US\$ milhões)	Participação (%)	País	Valor (US\$ milhões)	Participação (%)

Fonte: NEIT/IE/UNICAMP

“O comércio internacional de produtos cosméticos é amplamente dominado pelos países desenvolvidos, que praticam, em geral, níveis de tarifas bastante reduzidos, ou seja, não apresentam qualquer restrição de ordem tarifária ou comercial. As grandes empresas multinacionais valem-se da elevada capacidade técnica e produtiva de suas plantas espalhadas pelo mundo como uma forte barreira econômica que impede a entrada de novos concorrentes.” (GARCIA e FURTADO, 2002).

A França se destaca, apresentando um saldo comercial positivo de US\$ 8 bilhões.

Tabela III.11: Exportações mundiais de cosméticos por categoria (2006 e 2007)

Fonte: NEIT/IE/UNICAMP

As categorias perfumes e sabonetes foram as que mais cresceram neste período, mas apresentaram um pequeno aumento de participação relativa.

Se formos considerar a evolução desde o ano 2000, houve um grande aumento da participação relativa dos produtos de beleza e maquiagem (que era de 21,3% no ano em questão) e a perda de participação dos perfumes (era de 33,3% em 2000).

Ao analisar os diferentes segmentos do mercado mundial de cosméticos, observa-se que a liderança da França baseia-se em sua sólida posição nos dois principais produtos em termos de comércio mundial: Perfumes e Água de Colônia (37,5%) e Produtos de Beleza e Maquiagem (24,6%). Alemanha, Estados Unidos e Reino Unido possuem posições de destaque no ranking de todos os outros produtos analisados.

Tabela III.12: Principais países exportadores de cosméticos por categoria (2007)

Fonte: NEIT/IE/UNICAMP

As exportações brasileiras de cosméticos são extremamente concentradas em termos de mercados de destino. Pouco mais de 55% do total exportado de cosméticos pelo Brasil em 2007 foi destinado a países da América Latina, destacando-se a Argentina, país para o qual o Brasil mais exporta produtos deste setor. Em 2008, a Argentina continua sendo a maior parceira comercial do Brasil neste setor e o total exportado para os países da América Latina passa para quase 59% do total.

2007			2008		
País	Valor (US\$ milhões)	%	País	Valor (US\$ milhões)	%
ARGENTINA	114,9	21,9	ARGENTINA	138,8	22,4
ESTADOS UNIDOS	54,3	10,4	CHILE	61,8	10,0
CHILE	45,6	8,7	ESTADOS UNIDOS	58,0	9,4
VENEZUELA	26,3	5,0	VENEZUELA	37,3	6,0
PAISES BAIXOS (HOLANDA)	21,7	4,1	PERU	24,9	4,0

PARAGUAI	14,4	2,7	PARAGUAI	16,5	2,7
Total Top 10:	343,4	65,5		419,3	67,8
Total de produtos do capítulo 33 exportados pelo Brasil:	524,2	100,0		618,8	100,0

Tabela III.13: Principais destinos das exportações brasileiras do setor de Cosméticos (2007 e 2008)

Fonte: Elaboração própria (Dados do ALICE Web, MDIC)

Pode-se destacar ainda a composição das pautas de exportação, onde predominam produtos para higiene oral e preparações capilares, que juntos respondem por quase metade dos produtos do capítulo 33 exportados tanto em 2007, quanto em 2008.

Observa-se que a participação do Brasil nas exportações dos segmentos mais importantes do setor cosmético (produtos de beleza e maquiagem e perfume e águas de colônia) ainda é marginal.

Produto	2007		2008	
	Valor (US\$ milhões)	%	Valor (US\$ milhões)	%
Perfumes e Águas de Colônia	5,0	1,0	5,9	1,0
Produtos de Beleza e Maquiagem	37,3	7,1	49,6	8,0
Preparações Capilares	118,9	22,7	161,5	26,1

Desodorantes e Preparações para Barbear	38,3	7,3	49,3	8,0
Total parcial:	335,5	64,0	403,1	65,1
Total de produtos do capítulo 33 exportados pelo Brasil:	524,2	100,0	618,8	100,0

Tabela III.14: Exportação de produtos cosméticos brasileiros por setores (2007 e 2008)

Fonte: Elaboração própria (Dados do ALICE Web, MDIC)

No caso das importações, a concentração de parceiros é maior, uma vez que os três principais exportadores para o Brasil responderam por 62% do total em 2007 e 64,5% em 2008.

Esse aumento deve-se, principalmente, pela importância assumida pela Argentina, que representava cerca de 23% do total importado em 2007 e passou a representar quase 29% em

2008. Outros países que se destacam são França e EUA, países líderes da indústria cosmética mundial, que exportam para o Brasil produtos mais sofisticados, especialmente perfumes e colônias.

2007			2008

Tabela III.15: Principais origens das importações brasileiras do setor de Cosméticos (2007 e 2008)

Fonte: Elaboração própria (Dados do ALICE Web, MDIC)

Em suma, o comércio exterior absorve uma parte marginal da demanda e da oferta de produtos de cosméticos. A estrutura modesta dos fluxos internacionais pode ser caracterizada pela importação de produtos cosméticos sofisticados, oriundos de países centrais como França e EUA, e na ação de empresas transnacionais dos segmentos de higiene pessoal, que distribuem produtos de forma especializada, ou do Brasil para o resto da América do Sul ou da Argentina para o Brasil. (HIRATUKA, 2008)

Capítulo IV – Implementação do REACH

A fim de verificar se a empresa está ou não abrangida pelo REACH, deve-se ter atenção, após efetuar um inventário das substâncias envolvidas na sua atividade, para aferir quais as substâncias incluídas e quais as isentas, total ou parcialmente, no seu campo de aplicação e quais as responsabilidades dos diferentes operadores ao longo da cadeia de abastecimento. Para aderir à nova política europeia, as empresas brasileiras devem fazer uma análise minuciosa do seu negócio. O volume de recursos que será despendido, por exemplo, com contratação de representante exclusivo, registros, testes e elaboração de documentos, poderão inviabilizar sua

permanência no mercado europeu e até sua sobrevivência como empresa. Portanto é necessário rever os seguintes tópicos:

- Importância do mercado europeu para o seu negócio, independentemente dos custos envolvidos;
- Importância do produto (substância) no seu portfólio de negócios com a Europa;
- Importância do seu produto (substância) no portfólio do cliente europeu;

Além disso, é conveniente que se tenha uma equipe responsável e com o grau de conhecimento necessário para que se faça a adequação dos negócios às exigências do REACH. Será necessário avaliar e determinar o melhor para empresa quanto à forma de representação na Europa, avaliar os custos de registro e manutenção da representação legal, fazer a avaliação da qualidade do contrato oferecido pelo “*only representative*” designado para ser o responsável pelo registro, o custo de participação nos consórcios e todas outras incumbências pertinentes a esta regulamentação.

Tendo decidido pela implementação do regulamento, a empresa nacional deverá seguir os seguintes passos para se preparar para a nova política que está em vigor:

- Elaborar o inventário das substâncias que a sua empresa compra, utiliza, fabrica, importa ou vende;
- Fazer uma análise de sua linha de produção; custo x benefício por produto (com base na(s) substância(s) contida(s));
- Verificar a abrangência das substâncias produzidas e exportadas, levando em consideração o quanto é exportado, seja em produto acabado ou de forma pura, de cada substância química produzida pela própria empresa;
- Identificar seu papel no enquadramento do REACH: é fabricante, importador, utilizador ou distribuidor destas substâncias ou preparações;
- Definir sua lista de produtos baseado em uma análise de longo prazo;
- Comparar as substâncias exportadas com a lista de substâncias isentas;
- Analisar suas obrigações e deveres como exportador;
- Informar-se sobre os prazos de implementação de cada ação, de acordo com a quantidade e o risco;
- Informar-se sobre a obrigatoriedade de registro para substâncias produzidas acima de uma tonelada e da necessidade de preparar um relatório de segurança química (*Chemical Safety Report - CSR*) para substâncias produzidas acima de 10 toneladas;

- Buscar alternativas de redução de custos participando dos SIEF's ou Consórcios;
- Informar aos seus clientes (os "DUs") seus direitos e obrigações, inclusive no que se refere ao uso que eles fazem de suas substâncias, contribuindo na elaboração do *Chemical Safety Assessment* - CSA e da FISPQ (Ficha de Informação de Segurança de Produtos Químicos).

Caso o produtor não tenha as informações necessárias para a elaboração da documentação mencionada acima, deverá fazer os testes requeridos. Entretanto, antes de iniciá-los, deverá verificar a possibilidade de juntar-se a um ou mais consórcios relacionados no site da ECHA.

É muito importante que a empresa conheça bem os produtos que pretende exportar. Para que não corra o risco de ter seu registro negado, todas as substâncias contidas no produto devem ser identificadas, inclusive as contaminações. Tendo as substâncias identificadas, deve-se fazer consultas às bases de dados da UE (IUCLID, EINECS, ELINCS, etc) para saber se existem mais informações sobre as mesmas, evitando fazer testes desnecessários. É necessário que todas as substâncias tenham suas propriedades físico-químicas, toxicológicas e ecotoxicológicas determinadas. A Avaliação de riscos reais e potenciais das substâncias contidas nos produtos também tem que ser feita. A empresa (ou seu representante exclusivo) será responsável por essas informações e pelo uso seguro de suas substâncias. É indispensável que se saiba todas as aplicações dos produtos exportados e os riscos associados para que se possa ter uma avaliação e classificação das substâncias como CMR, PBT, vPvB, POP ou sujeitas à autorização e a existência de restrições de uso.

Com relação à participação de uma empresa nacional nos SIEF'S, torna-se necessário uma avaliação da própria empresa com relação às características destes fóruns. Um SIEF possui os seguintes desafios e características:

- Existência de um líder, que submeterá o registro em nome dos outros;
- Compartilhamento dos custos envolvidos, evitando testes desnecessários e onerosos;
- Implica na abertura de todas as informações sobre o produto;
- Compartilhamento de informações, dados e estudos requeridos;
- Colaboração entre concorrentes e escolha de um representante;
- Possui diferentes visões e culturas, nacionais e empresariais.

Caso a empresa discorde das decisões tomadas em um SIEF, ela poderá usufruir do mecanismo chamado opt-out. Trata-se de um registro individual em que a empresa pode optar por atuar

sozinha, necessitando de uma justificativa junto a Agência, como, por exemplo, discordância na divisão de custos ou o fato de ela achar que será prejudicada comercialmente ao divulgar informações confidenciais. Nos casos em que as moléculas também sejam quase exclusivas de uma empresa a opção pelo opt-out será praticamente natural.

IV.1 – Custo de registro e responsabilidades após sua execução

A estimativa de custo para o Registro depende de diversos parâmetros:

- Volume Comercializado;
- Se o produto é perigoso ou não (perigosos poderão custar cerca de 50% a mais do que os não perigosos – requerem mais testes);
- Do consórcio formado (incluindo os custos administrativos, negociais e número de empresas consorciadas, freqüência de reuniões, etc);
- Das aplicações do produto (maior número de aplicações mais dados);
- Do volume e confiabilidade das informações já disponíveis para atendimento a outros programas que envolvem dados de toxicologia, segurança e riscos.

Além dos custos diretos como registro e autorização (quando necessário), testes e estudos, elaboração dos MSDS e CSR, participação nos consórcios, etc, existem os custos indiretos que são os mais difíceis de estimar e, quase com certeza, os mais vultosos, por exemplo, gastos com representante legal, responsável técnico, consultoria, viagens e impostos pagos no Brasil para remessa de divisas. A tabela IV.1 a seguir dá uma idéia dos custos de registro de substâncias no REACH.

Custo de Registro de Substâncias no REACH

FAIXA DE TONELAGEM	REGISTRO PELO MÉTODO DE COMPARTILHAMENTO	TAXA	DESPESAS DE TESTES	TOTAL	1 REGISTRANTE	5 REGISTRANTES	10 REGISTRANTES	50 REGISTRANTES

Um compromisso da Indústria Química

Tabela IV.1: Custo de registro de substâncias no REACH

Fonte: HENRIQUE, 2008

Outras considerações com que a empresa deve planejar de antemão para não ter problemas no meio do processo:

- Já ter preparado um orçamento para as despesas de registro;
- Preparar um plano de comunicação para os “*stakeholders*”;
- Adequar os sistemas computacionais internos aos requerimentos do REACH;
- Avaliar a confiabilidade das informações dos *downstream users*;
- Garantir ao importador a qualidade dos seus produtos (substâncias contidas);
- Incluir o REACH como parte do negócio.

Tendo obtido os registros das substâncias que serão exportadas, a empresa registrante (ou seu representante legal) continua tendo algumas responsabilidades. Após o registro, deve-se manter a Agência atualizada em relação a tudo que se diz respeito a substância registrada. Mudança na composição, alterações no volume comercializado, identificação de novos usos, identificação de

novos riscos que levem a qualquer mudança na MSDS ou no CSR e alteração na classificação e rotulagem devem ser comunicados.

Além dessas obrigações é necessário também que a empresa mantenha seu Status e identidade em dia. Cada atualização estará submetida ao pagamento da taxa correspondente. Caso a empresa tenha feito um pré-registro e tenha desistido de registrar definitivamente a substância, ela deve informar a Agência dessa desistência.

IV.2 – Impactos no Brasil e no mundo

Do ponto de vista da indústria química, uma regulação mundial sobre produtos perigosos é desejável, porém os estudos sobre a implantação de uma regulação mundial desse tipo apontavam para um processo lento de implementação, esperado para 2020. O REACH foi implantado com velocidade muito alta, o que gerou, e ainda gera, uma série de dúvidas, questionamentos legais, incertezas e ameaças sobre as empresas afetadas.

Os impactos desta nova legislação sobre o comércio mundial serão imensos. Apesar de não ser uma barreira comercial propriamente dita porque também se aplica aos produtos europeus, os altos custos e a complexidade do regulamento podem acabar transformando-o nisto.

Somente agora, com a publicação da lista de substâncias pré-registradas, os fabricantes de todo o mundo poderão saber quais empresas eventualmente preferiram recuar do mercado europeu. Quando expirou o prazo estipulado pela Agência Europeia de Substâncias Químicas, havia mais de 1 milhão de pré-registros efetuados por empresas espalhadas por todo o planeta, cobrindo mais de 60 mil substâncias.

Analisando a lista de substâncias pré-registradas disponível no site da ECHA, verifica-se a não existência de substâncias com prazo limite para registro em 2018, que é o prazo para substâncias produzidas/importadas na faixa de 1-100 ton/ano por empresa. Por essa informação, conclui-se que as pequenas e médias empresas que comercializavam na UE menos de 100 ton/ano abstiveram-se do registro, provavelmente pelos altos custos envolvidos no processo.

A grande maioria das substâncias apresentou prazo limite para 2010 e a minoria para 2013, o que pode significar que as grandes empresas multinacionais são as maiores interessadas em manter seus produtos comercializados no bloco, apesar dos custos envolvidos.

A UE estima que cerca de 2% das substâncias atualmente disponíveis no mercado mundial deixarão de ser fabricadas ou por se tornarem economicamente inviáveis, em consequência das despesas com a regulamentação, ou por falta de segurança. Parte das substâncias às quais o REACH se refere como "de alta preocupação" será banida.

Não serão somente as empresas de substâncias químicas que irão ser impactadas. Empresas que utilizam em seus produtos de exportação algum insumo químico também serão afetadas.

Se um produtor de calçados (do Brasil ou outro país) exportar para a UE uma quantidade de calçados, usando no total mais de uma tonelada de cola, terá que registrar essa cola na Agência, ou esperar que um importador ou produtor europeu tome a iniciativa. A regulamentação alcança ácidos, metais, solventes e, por tabela, uma grande quantidade de bens de consumo mais imediatos como equipamentos e construção automotiva e aeronáutica, perfumes, xampu, têxteis, cosméticos, detergentes, pinturas, verniz, adesivos etc. O etanol, já alvo de barreiras, terá de provar que não causa danos à saúde.

Outro impacto direto poderá ser com relação aos testes com animais. Analistas calculam que sejam necessários pelo menos 1 milhão de testes com animais, a menos que já existam informações de que o produto não afeta nem a saúde humana, nem o meio ambiente.

A UE estima que o novo sistema custará até 5,2 bilhões de euros para a indústria. Mas estimativas do setor chegam a cifras acima de 28 bilhões de euros. A UE argumenta que haverá poupança de mais de 50 bilhões de euros com gastos de saúde ao longo de 30 anos, com menos pessoas expostas a produtos químicos perigosos.

Para exportar para a UE, as empresas que utilizam substâncias químicas em seus produtos ou produzem as próprias têm que provar, através de seu "*only representative*", que o uso destas é seguro para saúde humana e para o meio ambiente. Em um primeiro momento as empresas enfrentaram os seguintes problemas com a implementação do REACH:

- Demanda por recursos vultosos para adequação ao REACH
- Desconhecimento da dinâmica do processo

- ✓ Legislação muito complexa, constantes referências a outras Diretivas Europeias, milhares de páginas incluindo o Regulamento e os *REACH Implementation Projects – RIP's*,
- ✓ Dificuldade de compreensão do todo, em função da legislação ainda não estar completa. RIP's sendo editados e reeditados freqüentemente;
- Dificuldade de interação devido à distância
- Falta de conhecimento detalhado das propriedades e riscos das substâncias

O principal gasto inicial relaciona-se à contratação de um intermediário europeu (*only representative*) para concretizar suas vendas externas junto a uma empresa devidamente registrada. Os representantes exclusivos para fabricantes de fora da Europa cobram de € 70 mil a € 120 mil por substância. Além disso, os fabricantes terão de arcar com viagens e as taxas recolhidas para a ECHA (vide tabela IV.2 a seguir).

(EUR)

	Apresentação individual	Apresentação conjunta
Taxa para substâncias na gama de 1 a 10 toneladas	1 600	1 200
Taxa para substâncias na gama de 10 a 100 toneladas	4 300	3 225
Taxa para substâncias na gama de 100 a 1 000 toneladas	11 500	8 625
Taxa para substâncias na gama superior a 1 000 toneladas	31 000	23 250

Tabela IV.2: Estimativa das taxas a serem pagas à Agência

Fonte: REACH

Em um segundo momento outros impactos poderão ser sentidos pelas empresas. Devido a restrições de uso de certos insumos e os próprios gastos com o REACH, haverá um provável aumento dos custos das matérias-primas permitidas de serem usadas. Para as empresas que usam substâncias químicas em seus produtos, haverá uma possível redução de fornecedores, já que nem todos adotaram o novo regulamento. Estas duas conseqüências poderão causar descontinuidade de fornecimento de alguns ingredientes por razões de rentabilidade, o que provocará uma reformulação de produtos, que significa novos estudos. Além disso, espera-se um aumento da competitividade, havendo ainda a possibilidade de perda de mercado para os casos em que o pré-registro/registo não for efetivado.

Para a indústria nacional o quadro é preocupante porque não há levantamento que mostre quantos empreendimentos já estão se adaptando para cumprir esta barreira, o que se constitui em uma ameaça ao desempenho da balança comercial nos próximos anos.

Segundo a Secretária de Comércio Exterior, poucas empresas tomaram iniciativas para adequar-se à norma. Essa é uma postura preocupante, uma vez que as exportações enquadradas na nova regulação respondem por cerca de 50% do comércio com o bloco.

IV.2.1 – Atitudes tomadas no Brasil

Diante da situação, três entidades industriais se uniram para alertar o pólo industrial brasileiro sobre a necessidade de conhecerem e implantarem o REACH, a Confederação Nacional da Indústria (CNI), a Associação Brasileira da Indústria Química (ABIQUM) e o Instituto Brasileiro de Mineração (IBRAM). A ABIQUIM foi uma das pioneiras a estudar a questão e orientar seus associados. A CNI e o IBRAM se juntaram a ela numa tentativa de disseminar as regras em todo o País. As autoridades da UE estiveram preocupadas com a falta de providências por parte das indústrias do Brasil e de outras partes do mundo para se adequarem ao REACH. Dirigentes europeus estiveram aqui no Brasil para explicar a urgência dessas medidas aos industriais e técnicos brasileiros.

Para apoiar as empresas brasileiras que aderiram ao REACH, o governo vai abrir, neste ano, um escritório da Agência de Promoção de Exportações (APEX) em Helsinque, na Finlândia. Existem outros estudos sendo feitos para satisfazer algumas reivindicações feitas pelas empresas que estão ligadas à produção de substâncias e que foram afetadas pela decisão europeia. A Receita confirma a existência de estudos para isentar as companhias de impostos, que, segundo calculam as associações do setor privado, podem encarecer em até 30% os custos de registro no REACH. Seriam impostos devido às remessas de moeda estrangeira necessárias para cobrir as despesas burocráticas de registro (como testes físico-químicos e sanitários) e de manutenção de representantes exclusivos das companhias para os contatos com a ECHA. O assunto está na pauta da Câmara de Comércio Exterior (CAMEX). O pedido de financiamento dos custos para registro no REACH através do BNDES foi levado ao banco pelo Ministério do Desenvolvimento, mas não chegou às superintendências encarregadas de estudar a criação de uma nova linha, ou a aplicação, para esse fim, de financiamentos já existentes. Os técnicos dizem desconhecer estudos para atender à demanda dos empresários, embora a intenção de apoiar financeiramente as

empresas tenha sido anunciada no Congresso pelo secretário de Comércio Exterior, Welber Barral (Fonte: Valor Econômico).

Filiais de grandes empresas multinacionais têm informado ao governo que estão cuidando do registro por intermédio das próprias matrizes e as maiores empresas nacionais já fizeram o pré-registro. A extensa e complexa legislação européia, com constantes mudanças e correções, porém, cria no governo e no setor privado o temor de que setores afetados só percebam o problema quando começarem a enfrentar dificuldades nos embarques para os europeus.

Os impactos da medida no fluxo de comércio entre o Brasil e o bloco, especialmente no que diz respeito às atividades das pequenas e médias empresas, foi inevitável. Néelson Pereira dos Reis, Vice-Presidente da ABIQUIM, declarou que algumas companhias de menor porte consideraram deixar de exportar à UE, uma vez que os custos de adaptação ao sistema criado representaram um ônus excessivamente elevado frente à disponibilidade de recursos (ICTSD, 2008). Aproximadamente 500 empresas brasileiras exportavam ou forneciam substâncias a exportadores para a UE. Foi constatado que 14% das empresas integrantes do Guia da Indústria Química no Brasil não pretendiam pré-registrar seus produtos no cadastro europeu.

Os produtores que aderiram à nova política têm formado consórcios para repartir os gastos, como os fabricantes de etanol, silicone e alumínio.

O secretário Welber Barral chamou atenção para o fato de que as empresas que não efetuaram o pré-registro não avaliaram as conseqüências disto. Segundo ele, parte significativa dos exportadores brasileiros ignoraram que a falha em cumprir com o requisito acarreta a perda da licença de exportação, o que impede a entrada de seus produtos no mercado europeu.

Cerca de 60% das exportações brasileiras para a União Européia devem ser afetadas pelo REACH. Cerca de 30 mil produtos químicos serão testados e revistos pela ECHA, de acordo com as novas normas.

IV.2.2 – Impactos na indústria cosmética brasileira

Apesar de a indústria cosmética ter seu próprio regulamento e contemplar as diretivas internacionais, ela está sujeita ao REACH por não ter avaliação do impacto dos componentes

químicos que constituem os cosméticos no meio ambiente. Eles foram testados somente quanto à saúde humana. Por isso têm de passar por testes de ecotoxicidade. Mesmo assim não existe superposição ou duplicidade entre o REACH e a diretiva de cosméticos. Segue abaixo uma rápida comparação entre as duas políticas, ressaltando o que elas têm em comum:

OBJETIVOS DO REACH (1907/2006)

- O REACH é para assegurar que as substâncias que as indústrias produzem, colocam no mercado ou usam não tem efeitos adversos para a saúde humana ou para o meio ambiente, ou seja, assegurar um *índice elevado de proteção à saúde humana* e ao meio ambiente;
- *Promover alternativas aos testes em animais;*
- *Assegurar livre circulação de substâncias no mercado da UE;*
- Fomentar a competitividade e inovação.

OBJETIVOS DA DIRETIVA (76/768/EEC)

- A Diretiva regula a composição e rotulagem de produtos cosméticos;
- *Assegurar um índice elevado de proteção ao consumidor;*
- Assegurar a livre circulação de produtos cosméticos em toda a UE;
- Parte do princípio que todos os produtos seguros que cumpram com os requerimentos da Diretiva devem *ter igual e imediato acesso ao mercado;*
- Os fabricantes e importadores são responsáveis por assegurar o cumprimento da Diretiva para garantir a segurança dos produtos cosméticos;
- *Promover o desenvolvimento de metodologias alternativas.*

As fabricantes brasileiras de cosméticos que exportam para a UE são quase todas pequenas e médias empresas. As empresas que tomaram a decisão de manter seus negócios com a UE tiveram, em conjunto com seus importadores da UE, que atuar de forma rápida e organizada para identificar cada substância, calcular em que volume está presente em seus produtos, passar os dados ao importador. Este, por sua vez, precisou reunir as informações de todos os seus fornecedores, avaliar quais substâncias atingem ou ultrapassam mil toneladas anuais em seu negócio, descobrir assim quais dos componentes precisavam fazer o pré-registro antes que o prazo se esgotasse.

Pode-se, de uma forma sucinta, enumerar impactos negativos e positivos para a indústria cosmética quanto à aplicação da nova política europeia:

IMPACTOS NEGATIVOS

- Redução da disponibilidade de certos ingredientes, especialmente os de baixa tonelagem (maior impacto esperado);
- Aumento de custo dos ingredientes;
- Reduzido número de fontes de suprimento;
- Reformulação de produtos;
- Efeitos na capacidade de inovação das empresas.

IMPACTOS POSITIVOS

- Intercâmbio de informação dentro da cadeia de suprimentos (supply chain);
- Melhora do conhecimento das substâncias;
- Melhora da confiança nas substâncias, assim como aumento da transparência das informações.

Uma forte tendência no setor é o aumento na utilização de ingredientes naturais, pois estes não precisam ser registrados. No mundo todo, o mercado de cosméticos naturais cresceu, em média, 14,1% ao ano, no período de 2002 até 2007, enquanto no Brasil o crescimento foi maior: alcançou no mesmo período 18% em média, ao ano.

IV.3 – Exemplo demonstrativo

O estudo de caso a seguir visa a exemplificar como uma empresa cosmética deve analisar um determinado produto do seu portfólio, levando em consideração o desejo de exportá-lo para União Européia, para que esta saiba se é necessário registrá-lo junto a ECHA ou não. No texto abaixo são listadas observações sobre cada substância química presente no produto.

Uma empresa que comece a exportar 100 toneladas por ano do seguinte gel-creme hidratante para a União Européia:

Fase	Matéria-prima (INCI Name)	% p/p	100ton/ano
A	Cetearyl Alcohol (and) Dicetyl Phosphate (and) Ceteth-10 Phosphate	4,000	4,000
	Propylparaben	0,025	0,025
	Cetyl Acetate (and) Acetylated Lanolin Alcohol	1,000	1,000
	Theobroma Grandiflorum Seed Butter (and) Butyrospermum Parkii (and) Astrocaryum Vulgare	2,000	2,000
B	Carbomer	0,300	0,300
	Water	qsp 100,00	99977,175
C	Water (and) Botryocladia Occidentalis Extract (and) Hypnea Musciformis Extract (and) Sargassum Vulgare Extract	5,000	5,000
	Water	10,000	10,000
	Methylparaben	0,200	0,200
D	Triethanolamine	0,300	0,300

Tabela IV.3 – Gel-creme hidratante

Fonte: Elaboração própria, 2004

A empresa em questão é um utilizador a jusante, e, portanto, não tem obrigatoriedade de registrar as matérias-primas utilizadas caso estas já tenham sido pré-registradas (e futuramente registradas) por seus fabricantes (ou importadores).

Como somente as substâncias acima de 1 tonelada devem ser registradas, as matérias-primas que devem ser registradas são as preparações (especialidades fabricadas por outras empresas fornecedoras):

- 1- Cetearyl Alcohol (and) Dicetyl Phosphate (and) Ceteth-10 Phosphate
- 2- Cetyl Acetate (and) Acetylated Lanolin Alcohol
- 3- Theobroma Grandiflorum Seed Butter (and) Butyrospermum Parkii (and) Astrocaryum Vulgare
- 4- Water (and) Botryocladia Occidentalis Extract (and) Hypnea Musciformis Extract (and) Sargassum Vulgare Extract

A água não tem necessidade de ser registrada.

As outras substâncias, por estarem em quantidade menor do que uma tonelada e não pertencerem à lista de produtos restritos ou à lista de substâncias de grande preocupação, não precisam ser registradas.

De acordo com a lista das substâncias já pré-registradas, encontrada no site da ECHA e em anexo na versão digital do presente trabalho, podemos verificar quais matérias-primas faltam ser registradas:

INCI Name	CAS #	EINECS/ELINCS #	Foi pré-registrada?	Data para Registro
Cetearyl Alcohol	67762-27-0	267-008-6	Sim	30/11/2010
Dicetyl Phosphate	2197-63-9	218-594-7	Sim	30/11/2010
Ceteth-10 Phosphate	50643-20-4		Não	
Cetyl Acetate	629-70-9	211-103-7	Sim	30/11/2010
Acetylated Lanolin Alcohol	61788-49-6	262-980-8	Sim	30/11/2010
Theobroma Grandiflorum Seed Butter	394236-97-6		Não	
Butyrospermum Parkii	91080-23-8	293-515-7	Não	
Astrocaryum Vulgare Fruit Oil	98143-57-8	308-622-7	Não	
Botryocladia Occidentalis Extract			Não	
Hypnea Musciformis Extract		223751-71-1	Não	
Sargassum Vulgare Extract			Não	

Tabela IV.4 – Ingredientes do gel-creme x pré-registro

Fonte: Elaboração própria (Dados ECHA)

Na preparação 1, um de seus componentes não foi pré-registrado (CETETH-10 PHOSPHATE).

Todos os componentes da preparação 2 já foram submetidos ao pré-registro.

Nenhum componente das preparações 3 e 4 foi pré-registrado. Estas, apesar de serem oriundas de produtos encontrados na natureza (frutos e algas), não se encontram em sua forma original, logo necessitam sim de registro.

Caso a empresa esteja fabricando (ou importando) o produto pela primeira vez após 01/12/2008, período limite para o pré-registro, ela pode se enquadrar no caso de pré-registro tardio (*late pre-registration*), podendo ela solicitar ao fabricante das matérias-primas não-registradas que realize este procedimento caso tenha interesse ou ela mesma poderá realizá-lo.

No caso das matérias-primas pré-registradas, a empresa deve observar se o uso para o qual foram pré-registradas é o mesmo uso o qual ela faz das substâncias. No caso de o uso ser diferente, ela pode solicitar ao fabricante que registre o novo uso ou ela mesma realizar o procedimento.

Se a empresa não se enquadrar no *late pre-registration* e, portanto, tiver perdido o prazo de pré-registro, ela não poderá mais comercializar o seu creme na União Européia até a obtenção do registro final, caso seja de seu interesse.

Capítulo V – Conclusão

O REACH exprime uma das macrotendências do capitalismo moderno: a proteção do meio ambiente e da saúde humana em um momento mundial onde as conseqüências negativas dos nossos hábitos são crescentes. Ninguém pode questionar a validade da norma que tem estes tópicos como princípio básico. O que se tem que avaliar é qual impacto e como podemos nos adequar a essa política.

A indústria brasileira deve ter plena compreensão de que a ampliação dos rigores de natureza ambiental e social são tendências claras deste século, que vão afetar cada vez mais a competitividade da indústria. Temos exemplos claros dessas tendências, onde se destacam temas como mudanças climáticas e responsabilidade social das empresas, que vêm sendo cada vez

mais exigidos não somente pelas autoridades brasileiras, mas também pelos mercados consumidores. Isto vem mudando a relação da produção e consumo, com a incorporação de novas variáveis, muitas das quais impensáveis há alguns anos.

Também existe grande preocupação com os elevados custos que resultarão deste processo, além da imensa carga burocrática imposta. Porém, a melhor conduta de nossos exportadores é a de avançar na sua compreensão, na negociação de seus interesses e na cooperação para competir, ou deixar de participar do mercado europeu.

“À medida que as sociedades evoluem e ficam mais prósperas, sua estrutura de demanda se torna mais complexa e diversificada, com a incorporação de bens e serviços superiores. Ao impor novas exigências às características dos bens e serviços que consomem, criam um descompasso com as estruturas produtivas de países menos desenvolvidos ou emergentes. Não se trata, pois, de barreira não-tarifária.” (HADDAD, 2008)

O REACH é uma oportunidade para o Brasil ampliar sua participação no mercado europeu, ocupando uma fatia de mercado daqueles que resolveram não se adaptar a essa nova política.

Porém, é importante destacar também a extrema necessidade de apoio e ações governamentais para que os impactos deste novo regulamento não sejam por demais catastróficos. No momento em que é encontrado o andamento desta nova política, já deveriam ter sido tomadas algumas decisões por parte do governo, demonstrando assim um certo atraso do Brasil neste assunto.

Segundo especialistas neste tema, seguem abaixo medidas que devem ser tomadas no Brasil para que as empresas atingidas possam se adequar ao novo regulamento:

- Às Associações de Classe cabe divulgar, esclarecer, treinar e apoiar as suas associadas pois muitas empresas exportadoras ainda desconhecem o REACH;
- Às universidades, centros de pesquisa e laboratórios cabe se adequar às metodologias e normas internacionais para prestar os serviços analíticos necessários;
- Ao governo cabem ações de apoio ao financiamento, subvenção e outros instrumentos apropriados para suporte às empresas exportadoras;
- Às empresas cabe se organizar, negociar com clientes e fornecedores, planejar e se adequar buscando preservar mercados, empregos e rentabilidade

APÊNDICES

Apêndice A1 – Anexo IV do REACH: Lista de substâncias isentas de registro

EINECS No	Name/Group	CAS No
200-061-5	D-glucitol C ₆ H ₁₄ O ₆	50-70-4
200-066-2	Ascorbic acid C ₆ H ₈ O	50-81-7
200-075-1	Glucose C ₆ H ₁₂ O ₆	50-99-7
200-233-3	Fructose C ₆ H ₁₂ O ₆	57-48-7
200-294-2	L-lysine C ₆ H ₁₄ N ₂ O ₂	56-87-1
200-334-9	Sucrose, pure C ₁₂ H ₂₂ O ₁₁	57-50-1
200-405-4	α-tocopheryl acetate C ₃₁ H ₅₂ O ₃	58-95-7
200-416-4	Galactose C ₆ H ₁₂ O ₆	59-23-4
200-432-1	DL-methionine C ₅ H ₁₁ NO ₂ S	59-51-8
200-559-2	Lactose C ₁₂ H ₂₂ O ₁₁	63-42-3
200-711-8	D-mannitol C ₆ H ₁₄ O ₆	69-65-8
201-771-8	L-sorbose C ₆ H ₁₂ O ₆	87-79-6
204-664-4	Glycerol stearate, pure C ₂₁ H ₄₂ O ₄	123-94-4
204-696-9	Carbon dioxide CO ₂	124-38-9
205-278-9	Calcium pantothenate, D-form C ₉ H ₁₇ NO ₅ .1/2Ca	137-08-6
205-756-7	DL-phenylalanine C ₉ H ₁₁ NO ₂	150-30-1
208-407-7	Sodium gluconate C ₆ H ₁₂ O ₇ .Na	527-07-1
215-665-4	Sorbitan oleate C ₂₄ H ₄₄ O ₆	1338-43-8
231-098-5	Krypton Kr	7439-90-9
231-110-9	Neon Ne	7440-01-9
231-147-0	Argon Ar	7440-37-1
231-168-5	Helium He	7440-59-7
231-172-7	Xenon Xe	7440-63-3
231-783-9	Nitrogen N ₂	7727-37-9
231-791-2	Water, distilled, conductivity or of similar purity H ₂ O	7732-18-5

232-307-2	Lecithins The complex combination of diglycerides of fatty acids linked to the choline ester of phosphoric acid	8002-43-5
232-436-4	Syrups, hydrolyzed starch A complex combination obtained by the hydrolysis of cornstarch by the action of acids or enzymes. It consists primarily of d-glucose, maltose and maltodextrins.	8029-43-4
232-442-7	Tallow, hydrogenated	8030-12-4
232-675-4	Dextrin	9004-53-9
232-679-6	Starch High-polymeric carbohydrate material usually derived from cereal grains such as corn, wheat and sorghum, and from roots and tubers such as potatoes and tapioca. Includes starch which has been pre-gelatinised by heating in the presence of water.	9005-25-8
232-940-4	Maltodextrin	9050-36-6
238-976-7	Sodium D-gluconate C ₆ H ₁₂ O ₇ .xNa	14906-97-9
248-027-9	D-glucitol monostearate C ₂₄ H ₄₈ O ₇	26836-47-5
262-988-1	Fatty acids, coco, Me esters	61788-59-8
265-995-8	Cellulose Pulp	65996-61-4
266-948-4	Glycerides, C16-18 and C18-unsaturated. This substance is identified by SDA Substance Name: C16-C18 and C18 unsaturated trialkyl glyceride and SDA Reporting Number: 11-001-00.	67701-30-8
268-616-4	Syrups, corn, dehydrated	68131-37-3
269-658-6	Glycerides, tallow mono-, di- and tri-, hydrogenated	68308-54-3
270-312-1	Glycerides, C16-18 and C18-unsaturated. mono- and di- This substance is identified by SDA Substance Name: C16-C18 and C18 unsaturated alkyl and C16-C18 and C18 unsaturated dialkyl glyceride and SDA Reporting Number: 11-002-00.	68424-61-3
288-123-8	Glycerides, C10-18	85665-33-4

Apêndice A2: Listagem com os métodos de ensaios físico-químicos, toxicológicos e ecotoxicológicos previstos no regulamento:

- Físico-químicos:

- 1 – Temperatura de fusão/congelamento
- 2 – Temperatura de ebulição
- 3 – Densidade relativa
- 4 – Pressão de vapor
- 5 – Tensão superficial
- 6 – Solubilidade em água
- 7 – Não consta da proposta nenhum método de ensaio neste item**
- 8 – Coeficiente de partição
- 9 – Ponto de fugor
- 10 – Inflamabilidade de sólidos
- 11 – Inflamabilidade de gases
- 12 – Inflamabilidade em contato com água
- 13 – Propriedades pirofóricas de sólidos e líquidos
- 14 – Propriedades explosivas
- 15 – Temperatura de auto-ignição (gases e líquidos)
- 16 – Temperatura de auto-ignição (sólidos)
- 17 – Propriedades oxidantes (sólidos)
- 18 – Massa molecular média e distribuição de massa molecular em polímeros
- 19 – Teor de polímeros de baixa massa molecular
- 20 – Comportamento de polímeros na extração aquosa

- Toxicológicos:

- 1 – Toxicidade aguda oral
- 2 – Toxicidade aguda por inalação
- 3 – Toxicidade aguda dérmica
- 4 – Toxicidade aguda por irritação cutânea
- 5 – Toxicidade aguda por irritação ocular
- 6 – Sensibilidade cutânea
- 7 – Toxicidade oral de dose repetida (28 dias)
- 8 – Toxicidade por inalação de dose repetida (28 dias)

- 9 – Toxicidade dérmica de dose repetida (28 dias)
- 10 – Mutagenicidade (*in vitro* de aberrações cromossômicas em mamíferos)
- 11 – Mutagenicidade (*in vivo* de aberrações cromossômicas em medula de mamíferos)
- 12 – Mutagenicidade (*in vivo* de micronúcleos em eritrócitos de mamíferos)
- 13 / 14 – Mutagenicidade (mutante reversa em bactérias)
- 15 – Teste de mutagenicidade e seleção de mutação de genes carcinogênicos – *saccharomyces cerevisiae*
- 16 – Recombinação mitótica em levedura
- 17 – Mutagenicidade em células de mamíferos *in vitro*
- 18 – Lesão e reparação do ADN em mamíferos *in vitro*
- 19 – Teste de troca entre cromátides *in vitro*
- 20 – Letalidade recessiva na *drosophila*
- 21 – Transformação de células de mamífero *in vitro*
- 22 – Letalidade dominante no roedor
- 23 – Aberrações cromossômicas em espermatogônias de mamífero
- 24 – Teste das malhas no ratinho
- 25 – Translocação hereditária no ratinho
- 26 – Toxicidade oral ou subcrônica em 90 dias (roedores)
- 27 – Toxicidade oral ou subcrônica em 90 dias
- 28 – Toxicidade dérmica subcrônica
- 29 – Toxicidade subcrônica por inalação
- 30 – Toxicidade crônica
- 31 – Teratogênese
- 32 – Carcinogênese
- 33 – Combinado de toxicidade crônica e carcinogênese
- 34 – Toxicidade sobre a reprodução (uma geração)
- 35 – Toxicidade sobre a reprodução (duas geração)
- 36 – Toxicocinética
- 37 – Neurotoxicidade retardada de organofosforados (exposição aguda)
- 38 – Neurotoxicidade retardada de organofosforados (repetição 28 dias)
- 39 – Síntese não programada de DNA em células de fígado nos mamíferos
- 40 – Corrosividade cutânea
- 41 – Fototoxicidade

- Ecotoxicológicos:

- 1 – Toxicidade aguda para peixes
- 2 – Toxicidade aguda para *Daphnia*
- 3 – Inibição para algas
- 4 – Determinação da biodegradabilidade (simples)
- 5 – Demanda bioquímica de oxigênio (DBO)
- 6 – Demanda química de oxigênio (DQO)
- 7 – Degradação abiótica
- 8 – Toxicidade para minhocas
- 9 – Biodegradação Zahn-Wellens
- 10 – Biodegradação em lodo ativado
- 11 – Biodegradação em lodo ativado com inibição de respiração (respirometria)
- 12 – Biodegradação em lodo ativado semicontínuo modificado
- 13 – Bioconcentração em peixes
- 14 – Crescimento juvenil em peixes
- 15 – Toxicidade aguda em embriões de peixes
- 16 – Toxicidade aguda em abelhas (oral)
- 17 – Toxicidade aguda em abelhas (por contato)
- 18 – Adsorção e dessorção em amostra de sólidos
- 19 – Coeficiente de adsorção em solos por cromatografia líquida
- 20 – Ensaio sobre a reprodução de *Daphnia*

Apêndice A3: Dados de exportação por Capítulo NCM no ano de 2008 e no primeiro bimestre de 2009
